SAT Reading and Writing Questions

Converted to standardized website upload format | Module 1 and Module 2

Module 1**Question 1**

Source PDF page: 2

The following text is from Lilliam Rivera's 2020 novel *Never Look Back*. The text describes the narrator's friend Pheus, a young musician, after finishing a performance during a church service. Pheus pulls a handkerchief from his back pocket and wipes his forehead. I mime a quiet clap for him. He does a slight bow and flashes his dimples. This is where Pheus truly shines. When Pheus is in front of an audience, it's as if he becomes another person, a more heightened version of himself. As used in the text, what does the word "truly" most nearly mean?

- A. Mildly
- B. Scarcely
- C. Really
- D. Impolitely

Question 2

Source PDF page: 2

Native Hawaiian fiber artist Marques Hanalei Marzan creates art using the techniques of lauhala weaving. Lauhala weaving is a traditional Hawaiian art form that uses leaves of the hala tree. Often, Marzan doesn't have a specific what the final product will look like when he starts a new piece. Instead, he makes up his designs as he weaves, allowing inspiration to take him in unexpected directions. Which choice completes the text with the most logical and precise word or phrase?

- A. intention for
- B. admiration for
- C. imitation of
- D. acceptance of flesh at the | G ineyese weve, mm 5000 /

Question 3

Source PDF page: 3

In a study at the Massachusetts Institute of Technology, participants with clinically typical eyesight were shown a drawing of a broken line, with the break in the line situated in a blocked part of their field of vision. The participants still perceived the line as continuous, suggesting that when visual information is incomplete, the brain can ____, filling in what is missing. Which choice completes the text with the most logical and precise word or phrase?

- A. captivate
- B. revert
- C. barricade
- D. compensate

Question 4

Source PDF page: 3

The following text is from Shirley Jackson's 1951 novel *Hangsaman*. Natalie was leaving for her first year in college a week after her brother went back to high school; sometimes twenty-one days resolved itself into three weeks, and seemed endless; sometimes it seemed a matter of minutes slipping by so swiftly that there would never be time to approach college with appropriate consideration, to form a workable personality to take along. As used in the text, what does the word "consideration" most nearly mean?

- A. Admiration
- B. Indecision
- C. Reflection

D. Kindness fale*ch tial crt ee

Question 5

Source PDF page: 4

The Marsalis family is often referred to as “the first family of jazz.” Four of the children of celebrated pianist Ellis Marsalis Jr. went on to become performers who are also critically acclaimed: drummer Jason, trombonist Delfeayo, saxophonist Branford, and trumpeter Wynton. Wynton notably went on to become the first jazz composer to win the Pulitzer Prize for Music (for his oratorio *Blood on the Fields*). Which choice best describes the main purpose of the text?

- A. To explain why a family of musicians received a nickname
- B. To compare the artistic achievements of several musicians
- C. To show why a particular musician won a major award
- D. To emphasize why musicians should work together

Question 6

Source PDF page: 4

Community science, which involves professional scientists collaborating with members of the public to study a topic, is often an effective and engaging way to conduct research. It can increase the amount of data researchers can collect, offer insight into the daily life of a scientist, and spark youth interest in science. This approach was essential to the success of biologist Abbigail Merrill and colleagues’ study of how weather relates to a butterfly’s flower choice, which included findings from hundreds of students and community members in northwestern Arkansas. Which choice best states the function of the underlined sentence in the text as a whole?

- A. It offers details to clarify the claim made in the previous sentence.
- B. It establishes the limits of the conclusion presented in the sentence that follows.
- C. It provides a contrast with an idea presented in the previous sentence.
- D. It identifies the purpose of the study described in the sentence that follows. fale'ch athe |G ineyese weve, mm 5000 /

Question 7

Source PDF page: 5

Text 1 Scientists can learn a lot about the Hispaniolan ground sloth and other prehistoric sloths from their fossils. But it can be hard to study sloths alive today. In the wild, the Linnaeus’s two-toed sloth and other sloths spend most of their time in trees. They’re difficult to observe because of their excellent camouflage and slow movements. Text 2 Rebecca Cliffe and other scientists can now record the previously hidden activities of tree-dwelling sloths by using a backpack monitor. Such monitors can provide information to correct misconceptions. It was long believed that sloths are slow because of laziness. But, in fact, sloths’ slow movements are useful. Being slow protects them from predators with keen eyesight. The author of Text 1 and the author of Text 2 both discuss which topic? A The scientific study of sloths B How climate change affects sloths C The techniques scientists use to care for sloths D The differences between prehistoric and living sloths fale*ch tial

Question 8

Source PDF page: 6

Humans aren’t the only ones who use tools. Other animals also find tools helpful. Octopuses use two halves of a seashell to provide protection or a place to hide. And despite sometimes being thought of as simple, many birds make clever use of tools as well. New Caledonian crows are well known for creating hooks and spears from twigs. Furthermore, palm cockatoos have been observed using leaves to pad their beaks when opening nuts. According to the text, what are New Caledonian crows known for?

- A. They have larger brains than palm cockatoos have.
- B. They live longer than octopuses do.
- C. They create tools out of twigs.
- D. They use leaves as tools.

Question 9

Source PDF page: 6

Women like Minnie McNeal Kenny made important early contributions to the history of US cryptology, a field concerned with secure data communication and storage. Kenny worked for the National Security Agency (NSA) and received the NSA's two highest awards. She also held administrative positions at the National Cryptologic School. In this way, Kenny and others like her helped make it possible for more women-such as Anna Lysyanskaya, who currently works in and teaches digital cryptography-to enter the field of cryptology. According to the text, what is the relationship between Kenny and Lysyanskaya?

- A. Minnie McNeal Kenny taught Anna Lysyanskaya how to securely manage important data. FE! \) |r ts reeyere ere, moni sc0r
- B. Minnie McNeal Kenny and Anna Lysyanskaya worked together early in their careers.
- C. Minnie McNeal Kenny founded an organization that Anna Lysyanskaya currently works for.
- D. Minnie McNeal Kenny made earlier contributions to a field that Anna Lysyanskaya currently works within. fale'ch athe

Question 10

Source PDF page: 7

Optimal foraging theory (OFT) holds that animals' foraging behaviors reflect cost-benefit trade-offs that vary by species and with dynamic ecological circumstances. One such circumstance is lunar intensity, which Mahmoud-Reza Hemami and colleagues found to be negatively associated with foraging by Iranian jerboas but Deborah J. Curtis and colleagues found to be positively associated with foraging by mongoose lemurs. This discrepancy is explicable in terms of OFT: the lemurs' greater reliance on vision means that higher lunar intensity benefits them more than it benefits the jerboas. Information in the text best supports which statement about OFT?

- A. It can account for observations of different species responding differently to similar ecological circumstances.
- B. It tends to allow for a better understanding of the benefits of ecological circumstances than the costs of those circumstances.
- C. It may be weakened by the finding that the costs and benefits associated with a particular ecological circumstance vary by species.
- D. It can explain why some species act in accordance with cost-benefit trade-offs and others do not. flesh athe |G ineyese weve, mm 5000 /

Bird Species by Average Mass Common name Average mass (kg) Capable of flight? Lesser rhea 19.6 No Dalmatian pelican 11.5 Yes Andean condor 11.3 Yes Northern cassowary 44.0 No Most bird species that are capable of flight weigh less than a kilogram (kg), which is not surprising considering the burden that extra body weight puts on a flying animal. But not all flying birds are so light, as we can see most clearly in the example of Which choice most effectively uses data from the table to complete the example?

- A. northern cassowary, which has an average mass of 44.0 kg. FE! \) |r ts reeyere ere, moni sc0r
- B. Andean condor, which has an average mass below 10 kg.
- C. northern cassowary, which has a higher average mass than the lesser rhea.
- D. Dalmatian pelican, which has an average mass of 11.5 kg. fale*ch tial

Question 12

Source PDF page: 9

A student is writing a research paper on the history of irrigation in the United States, situating the development of Lake Yosemite (created in Merced County, California, in 1888) in a larger historical context. The student claims that California's climate renders irrigation an essential component of agriculture in some parts of the state but not in others. Which quotation from a study of California agriculture best supports the student's claim?

- A. "While the low humidity of Southern California's desert areas makes irrigation a requirement if agriculture is to be a success there, the relatively high humidity in the northern parts of the state makes such practices less necessary."
- B. "The irrigation system developed by the Hohokam people in the 7th century CE in what is now Arizona was simple but applied hydraulic engineering design features that are in use today throughout California."
- C. "Sprinkler irrigation systems are a method of irrigating that requires machinery to spray water in all directions. These

systems can presently be found in use throughout California.”

D. “The usefulness of irrigation infrastructure in California today cannot be overstated, since it is the most common means of conveying water for agricultural purposes.” flesh athe Gey ses UE, ol 500

Question 13

Source PDF page: 10

Maximum Charge Measured for Various Pollinators Charge @ houseflies @ red mason bees wintering honeybees
Terrestrial plants typically carry a negative electrical charge, while bees and other pollinators tend to accumulate a positive charge. A team of researchers therefore hypothesized that electrostatic attraction (mutual attraction between objects with opposite charges) might enhance pollen transmission between plants and their pollinator species. The team’s experiments showed that the maximum positive charge of wintering honeybees is sufficiently high to facilitate electrostatic pollen transfer, a finding that suggests that Which choice most effectively uses data from the graph to complete the text?

- A. red mason bees and houseflies, having greater maximum charges than wintering honeybees have, should not demonstrate this capacity.
- B. houseflies should demonstrate the opposite tendency.
- C. the minimum positive charge necessary for a pollinator to induce electrostatic attraction must be greater than 300 pC.
- D. red mason bees should also demonstrate this capacity. flesh athe

Question 14

Source PDF page: 11

Namibia has classified the house sparrow as an invasive species that could harm some of the country’s native species. But researchers Alejandro Camacho and Jason McLachlan have pointed out that “invasive” and “native” are labels that describe temporary circumstances. Changes in Earth’s climate may force animals from their current ranges. Climate changes may also create good habitats in areas where a species couldn’t live previously. These observations suggest that Which choice most logically completes the text?

- A. changes in Earth’s climate are likely to result in the house sparrow establishing itself as a native species in locations other than Namibia.
- B. Namibia was previously home to some house sparrows but they were outcompeted by invading species.
- C. it’s appropriate for Namibia to designate certain species as invasive but the country should designate the house sparrow as native.
- D. Namibia may eventually need to reexamine its designation of the house sparrow as invasive. fale*ch tial JDEFEN S/

Question 15

Source PDF page: 12

Password strength meters (PSMs) provide real-time feedback to users during the password-creation process about how secure a potential password is. PSMs often include “nudges”—design elements meant to encourage the creation of robust passwords. Other PSMs provide direct guidance on how to create strong passwords. A research team found that the strongest passwords resulted from a combination of these approaches. The team also found that the specific type of nudge (reciprocity, compensation, etc.) did not significantly affect user behavior. It therefore follows that when creating passwords, users receiving Which choice most logically completes the text?

- A. both compensation and reciprocity nudges would not be expected to create stronger passwords than users receiving reciprocity nudges only, although users receiving direct guidance would be expected to create stronger passwords than users receiving either type of nudge. this
- B. direct guidance would not be expected to create stronger passwords than users receiving compensation nudges, although users receiving compensation nudges would be expected to create stronger passwords than users receiving reciprocity nudges. both
- C. reciprocity nudges would not be expected to create stronger passwords than users receiving compensation nudges, although users receiving both direct guidance and reciprocity nudges would be expected to create stronger passwords than users receiving only reciprocity nudges. those
- D. both direct guidance and reciprocity nudges would not be expected to create stronger passwords than users receiving reciprocity nudges only, although users receiving this combination would be expected to create stronger passwords than users receiving both direct guidance and compensation nudges. fale*ch tial The Okavango Delta is a

vital water source and hub for biodiversity in southern Africa. Source PDF page: 21

As the use of non-oil energy resources has increased, the relationship between oil shocks-such as the 57% rise in oil prices from May 1979 to January 1980-and national economic activity has _____. Indeed, Gbadebo Oladosu and colleagues showed that the effect of recent oil shocks on the gross domestic product of India was only slightly greater than zero. Which choice completes the text with the most logical and precise word or phrase? A.reverted B.acquiesced C.oscillated D.abated

Question 4

Source PDF page: 21

The Federalist Papers are a collection of 85 essays written by Alexander Hamilton, John Jay, and James Madison. They were published pseudonymously in the New York Packet and other New York newspapers in 1787-88 and argue that New Yorkers should vote to ratify the proposed United States Constitution. Though the authorship of most of the individual essays is certain, that of a few is in question: for instance, while No. 15, "The Insufficiency of the Present Confederation to Preserve the Union," was surely penned by Hamilton, No.52, "The House of Representatives," may have been written by either Hamilton or Madison. Which choice best states the main purpose of the text? A.To summarize a contentious argument made in a collection of essays B.To describe a collection of essays and address what is known about their authorship C.To point out that some essays in a notable collection were written by one person, while others were written by two people D.To present the publication history of a collection of essays

Question 5

Source PDF page: 22

The Museum of Modern Art (MOMA) in New York City has an exhibition of video site, and SimCity 2000 from 1994, which visitors can see only in a video presentation. _____ MOMA claims the video presentations are only for games that would be impractical to display in a playable form, but video games are an inherently interactive medium, a feature that is grossly absent in a video-only presentation. Which choice best describes the function of the underlined portion in the text as a whole? A.It details a criticism of MOMA that the author defends against in the remainder of the sentence. B.It provides MOMA's rationale for a decision that the author critiques. C.It introduces a fact about video games that the author thinks MOMA did not appropriately consider when choosing which video games to exhibit. D.It presents a misconception about video games that the author believes is evident in MOMA's choice about which video games to exhibit.

Question 6

Source PDF page: 23

The following text is from Anne Spencer's 1922 poem "Translation." We trekked into a far country, My friend and I. Our deeper content was never spoken, But each knew all the other said. He told me how calm his soul was laid By the lack of anvil and strife. "The wooing kestrel," I said, "mutes his mating-note To please the harmony of this sweet silence." Which choice best describes the function of the reference to "anvil and strife" in the text as a whole? A.It emphasizes the way that nature provides a contrast to the feelings of the speaker and her friend. B.It illustrates how the speaker and her friend understand each other's feelings without having to talk about them. C.It represents a strong contrast to the speaker's friend's current experience of tranquility. D.It symbolizes the speaker's friend's view that meaningful work and social engagement are core components of a fulfilling life.

Question 7

Source PDF page: 24

The following text is adapted from Matthew Arnold's 1869 nonfiction book *Culture and Anarchy*. The Times [a British newspaper], replying to some foreign structures on the dress, looks, and behaviour of the English abroad, urges that the English ideal is that every one should be free to do and to look just as he likes. But culture indefatigably tries, not to make what each raw person may like, the rule by which he fashions himself; but to draw ever nearer to a sense of what is indeed beautiful, graceful, and becoming, and to get the raw person to like that. Which choice best states the main idea of the text? A.The process of determining what should be considered beautiful is likely to lead to disagreement. B.The English are unjustly derided for their sense of taste. C.Culture's duty is to use scientific methods to determine what is beautiful. D.One of the functions of culture is to create a consensus about matters of good taste.

Question 8

Studies of Cougar Population Density Study authors Location Methods Study Maximum area(square | density(cougars kilometers) | per 100 square kilometers) Randy North Dakota radio-collar 6,467 2.78 D.Johnson (United tracking States) Gregory Oregon scat-detecting 1,225 5.50 A.Davidson et (United dogs al. States) Juan I. Argentina Regular 1,179 4.90 Zanon-Martin camera ez et al. trapping David Utah (United Helicopter 1,300 10.24 M.Choate et States) surveying Studies of the population density of cougars (*Puma concolor*) have yielded a range of results, which may in part reflect differences in the effectiveness of the methods that researchers have used in their studies. If, for example, the use of helicopter surveying tends to lead to overestimates of cougar population density, that may explain why the study by Which choice most effectively uses data from the table to complete the example? A.Juan I. Zanén-Martinez et al. required a study area of 1,179 square kilometers, while the study by David M. Choate et al. required a study area of 1,225 square kilometers. B.David M. Choate et al. reported a maximum density of 10.24 individuals per 100 square kilometers, higher than that reported by several other studies. C.Randy D. Johnson reported a maximum density of only 2.78 individuals per 100 square kilometers, lower than that reported by several other studies. D.Gregory A. Davidson et al. reported a maximum density of 5.50 individuals per 100 square kilometers, while the study by Juan I. Zanén-Martinez et al., which used regular camera trapping, reported a lower maximum density.

Question 9

Source PDF page: 26

Autofiction is an emerging literary form that incorporates autobiographical writing into fiction. Practitioners of autofiction emphasize the autobiographical aspects of their work by patterning their protagonists' lives after their own, typically naming their protagonists after themselves. Autofiction usually borrows formal elements from autobiographical writing too, including its first person point of view and its use of a narrative voice so forthright that it borders on confessional. Ocean Vuong's 2019 novel *On Earth We're Briefly Gorgeous* is a representative work of autofiction, one that erases the distinction that fiction typically observes between authors and the characters they create. Which statement, if true, would most strongly support the text's description of *On Earth We're Briefly Gorgeous*? A.The novel portrays the upbringing of the protagonist, a young writer, in a working-class Vietnamese American family that is virtually identical to Vuong's family, and the protagonist narrates the novel in a tone that many reviewers describe as surprisingly frank. B.Although the narrative of *On Earth We're Briefly Gorgeous* proceeds in a largely chronological fashion, as narratives do in most works of fiction, the form of Vuong's narrative is unique: the novel consists of a single long letter that the protagonist, a soft-spoken young man, has written to his mother. C.*On Earth We're Briefly Gorgeous* makes use of imagery in much the same way that contemporary poetry does, exploiting certain images-butterflies, for example-for their emotional or conceptual associations; in this way, Vuong blurs the distinction between poetry and fiction. D.The

novel's protagonist bears an obvious resemblance to Vuong himself, and in interviews Vuong speaks of the protagonist as a sort of alternate self; yet the protagonist refers to himself as "Little Dog" throughout the novel and never divulges his actual name. fale*ch tial

Question 10

Source PDF page: 27

Projected Percent Change in Agricultural Production and Market Price under Tariff Elimination Scenario

Country	Percent change in total production	Percent change in market prices
Argentina	+0.90	+1.02
India	-1.34	-1.98
Russia	-3.48	-0.99
United States	+1.76	+0.44

A tariff is a tax on imported goods intended to protect domestic producers of similar goods from international competition. Eliminating tariffs can lead to an influx of cheaper imported goods, lowering prices; in a place where domestic production is relatively expensive, this influx can suppress domestic production, as the country's consumers favor more cheaply produced imported goods over domestically produced ones. A student consults a table showing projected changes in production and average market prices of agricultural commodities in four countries in a tariff elimination scenario. Based on the data, the student claims that compared with India and Russia, agricultural production in Argentina and the United States is likely relatively inexpensive. Which choice most effectively uses information from the text and data from the table to support the student's claim?

A. Although agricultural production in India and Russia would likely decrease if tariffs were eliminated, it would likely increase in both Argentina and the United States. B. Although eliminating tariffs would likely cause agricultural market prices to decrease in most locations, it would likely cause agricultural market prices to increase in both Argentina and the United States. C. Argentina and the United States are the only countries shown that are projected to see both an increase in agricultural production and a reduction in agricultural prices in the absence of tariffs. D. In the absence of tariffs, total agricultural production in Argentina and the United States would likely exceed that in India and Russia.

Question 11

Source PDF page: 28

The Clouds is a 423 BCE play by Aristophanes, originally written in ancient Greek. At the time, professional intellectuals called sophists taught customers rhetorical techniques to use in public speaking, along with providing instruction in other subjects. In the play, Aristophanes satirizes sophists as having an exaggerated sense of their own wisdom, as seen when the character Strepsiades encourages his son to learn to be a sophist, saying, "If you have any concern for your father's patrimony, become one of them." B. Strepsiades says of a sophist business, "There dwell men who in speaking of the heavens persuade people that it is an oven, and that it encompasses us, and that we are the embers. These men teach, if one give them money to conquer in speaking, right or wrong."

C. Socrates, a sophist, says to a new customer, "Come, then, take care that, whenever I propound any clever dogma about abstruse matters, you [seize] immediately."

D. Socrates, a sophist, says of a new customer, "I have not seen any man so boorish, nor so impracticable, nor so stupid, nor so forgetful; who, while learning some little petty quibbles, forgets them before he has learned them." flesh athe

Question 12

Source PDF page: 29

Reported Annual Travel Distances in Four Studies of Migrating Animal Populations

Species	Continent	Distance(km)	Measurement method
Mule deer	North America	772	RTD
Caribou	North America	3,807	GPS
Gray wolf	North America	2,155	GPS
White-eared kob	Africa	400	RTD

Some studies of migrating animals measure how far the animals travel in a year by fitting individuals with GPS tracking collars. Other studies track annual round-trip distance (RTD), which is equal to double the distance separating the two habitats a population migrates between each year. A researcher argues that since GPS records all of an animal's movements, using the GPS method to track a population would result in significantly higher recorded travel distances than using the RTD method would. For example, it's very likely that the distance reported for the caribou would be greater than 2,155 kilometers if the RTD method had been used. Which choice most effectively uses data from the table to complete the example?

A. caribou would be greater than 2,155 kilometers if the RTD method had been used. B. caribou would be less than 3,807 kilometers if the RTD method had been used. C. white-eared kob would be less than 400 kilometers if the GPS method had been used. D. white-eared kob would be greater than 3,807 kilometers if the GPS method had been used.

Question 13

Source PDF page: 30

Scientists recently created a model to predict how shorter winters will affect future mammal population sizes in US national forests. Unfortunately, when the model is applied to large forests, its predictions for large-mammal populations are too high, and when applied to small forests, its predictions for small-mammal populations are too high. Tuskegee National Forest in Alabama is a small forest, covering less than 100,000 acres. If used to evaluate the effect of shorter winters on this forest in ten years, the model would likely therefore Which choice most logically completes the text?

A.exaggerate the effect of shorter winters on large mammals. B.reflect factors affecting small mammals other than shorter winters. C.overestimate the actual population sizes of small mammals. D.ignore the predator-prey relationships between large and small mammals.

Question 14

Source PDF page: 30

Many contemporary Indigenous painters practice a specifically Indigenous mode of abstraction; for example, Dyani White Hawk assembles compositions out of motifs common in the beadwork and other traditional arts of her tribe. In contrast, the prominent Indigenous practitioners of abstract painting during the mid-twentieth century, such as the Luisefio artist Fritz Scholder, typically aligned their compositional strategies with Abstract Expressionism—a school of painting dominated by European American artists—instead of with traditionally nonrepresentational forms of Indigenous art. Thus, in the case of Scholder's generation, the identification of an abstract painting as Indigenous art tends to Which choice most logically completes the text?

A.place a greater emphasis on the artist's biography than on the aesthetic merit of the painting. B.obscure the Indigenous origins of certain motifs associated with Abstract Expressionism. C.depend not on stylistic details but instead on an awareness of the artist's identity. D.deny the extent to which cultural identity influences an artist's work.

Question 15

Source PDF page: 31

Paleoanthropologists have struggled to determine the onset of consistent clothing use by hominids. The appearance of hide-scraping tools by 780,000 years ago (780 Ka) enabled clothing production but does not entail it, and while clothing is thought to have been thermally superfluous for anatomically modern humans in their African range around their emergence by 300 Ka, it was essential for the persistence of humans outside Africa by 70 Ka. Melissa Toups et al. proposed a novel proxy: the evolution of the clothing-exclusive variant of the human-exclusive parasite *Pediculus humanus* (head lice), which Toups et al. date to as early as 170 Ka. This variant could not have emerged and survived without ample ecological niches, so if Toups et al. are correct, then Which choice most logically completes the text?

A. it is unlikely that hominids other than anatomically modern humans produced or wore clothing even though tools enabling the production of clothing existed well before the emergence of humans. B.humans most likely began regularly wearing clothing at some point after 170 Ka but before approximately 70 Ka. C.a substantial proportion of humans must have regularly worn clothing long before humans permanently inhabited areas cold enough to necessitate doing so. D.the spread of regular clothing use among humans after approximately 70 Ka may have been motivated by factors other than the thermal benefits that clothing provides.

While researching a topic, a student has taken the following notes: e@ Each month was divided into three weeks of ten days each, followed by five supplemental days. e@ Each day was named after a plant, animal, agricultural tool, or mineral as a way of honoring an aspect of rural life. @ Brumaire is the second month in the calendar. @ The fifth day of Brumaire is named Oie, which means “goose.” The student wants to emphasize how the French Republican calendar honored rural life. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. Each day in the French Republican calendar was given a name honoring an aspect of rural life; for example, a day in Brumaire was named for an animal, the goose. B. The second month in the French Republican calendar, Brumaire, had three weeks that were divided into ten days each. C. Each day in the French Republican calendar was given a unique name; the fifth day of Brumaire was no exception. D. Each day in the French Republican calendar's month of Brumaire had a unique name. flesh athe

Source PDF page: 37

While researching a topic, a student has taken the following notes: @ In a 2020 study, researchers in California investigated how many potential nesting sites female wood ducks visited during the nesting season. @ The researchers placed nest boxes throughout the survey area and tagged 138 female wood ducks with radio frequency ID trackers. @ These trackers recorded how many nest boxes each duck visited. @ 67 ducks (48.5%) visited only one nest box. @ 18 ducks (13.0%) visited 10 or more nest boxes. @ Younger ducks were more likely to visit multiple nest boxes. The student wants to present the methods used in the 2020 study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. After tracking how many nest boxes the 138 wood ducks visited, the researchers found that the younger ducks tended to visit more nest boxes than the older ducks. B. The researchers investigated each nesting site for signs that it had been visited by the female wood ducks. C. By recording how many nest boxes each duck visited, the researchers discovered that only a relatively small percentage (13.0%) of the ducks visited 10 or more nest boxes. D. The researchers tagged 138 female wood ducks with radio frequency ID trackers and recorded how many nest boxes each duck visited during the nesting season. flesh athe

Question 26

While researching a topic, a student has taken the following notes: @ Haym ibn Risch was a fourteenth-century Majorcan cartographer of portolan charts. @ Francesco Pizigano was a fourteenth-century Venetian cartographer of portolan charts. @ Portolan charts were early nautical charts that mapped the waterways of the Mediterranean and Black Seas. @ Portolan charts in the Venetian tradition tended to be sparse in illustrations. Those in the Majorcan tradition tended to be richly illustrated. @ In Majorcan charts, the Atlas Mountains are depicted as a palm tree, and Bohemia is depicted as a horseshoe. The student wants to make a distinction between the two portolan traditions. Which choice most effectively uses relevant information from the notes to accomplish this goal? A. Majorcan portolan charts, unlike their sparser Venetian counterparts, tended to be richly illustrated. B. Being in the Majorcan tradition, the portolan charts of Haym ibn Risch differed from those of the Venetian cartographer Francesco Pizigano. C. While portolan charts in the Majorcan tradition tended to be richly illustrated, those in the Venetian tradition mapped the waterways of the Mediterranean and Black Seas. D. Unlike Venetian portolan charts, which could include illustrations of palm trees and horseshoes, Majorcan charts were sparse in illustration. flesh athe

Question 27

Source PDF page: 39

While researching a topic, a student has taken the following notes: @ Squirrel pelts were used as commodity money in medieval Russia. @ In a commodity money economy, specific goods act as a common unit of monetary exchange that can be used to buy and sell other goods. @ In a barter economy, goods are traded directly between parties without the use of money. @ Economists Bruce Champ and Scott Freeman: bartering requires that “the person with whom you wish to trade must not only have what you want but also want what you have. The inefficiency is apparent; a great deal of time is spent merely finding someone with whom to trade.” @ Champ and Freeman: when “individuals might come to accept one particular good in exchange for others even if they do not wish to consume that The student wants to paraphrase a quotation from Champ and Freeman to explain the inefficiency of barter economies. Which choice most

effectively uses relevant information from the notes to accomplish this goal? A.The precise alignment of desires that barter economies require, Champ and Freeman contend, makes them inefficient. B.Champ and Freeman argue that inefficient barter economies can become monetary economies if a good becomes a unit of exchange. C.According to Champ and Freeman, the inefficiencies of barter economies become apparent when goods are traded between parties without the use of money. D.In a barter economy, Champ and Freeman contend, goods are traded directly between parties without the use of money, leading to inefficiency. fale'ch athe
