Question 6

Source PDF page: 4

'What is a city? The answer depends on where you live! Many countries define an area as a city based on how many people live there. However, not every country uses the same numbers. Albania defines a city as an area with a population of at least 400, while Greece defines a city as having a minimum population of 10,000. Some countries even define cities using other factors, like the number of buildings in the 'Which choice best describes the overall structure of the text? A. It lists the number of cities in one country, then compares that number to the number of cities in another country. B. It poses a question, then explains why the question has many answers. C. It describes two locations, then explains why only one of the locations is considered a city. D. It offers a recommendation, then provides reasons for that recommendation.

Poems is an 1895 collection of poetry by Frances E. W. Harper. In one of Harper's poems, the speaker suggests that those who mistreat people with less privilege will eventually receive divine judgment for it, saying, "Which quotation from Poems most effectively illustrates the claim? 'A. 'Men may tread down the poor and lowly, / May crush them in anger and hate, 'But surely the mills of God's justice/ Will grind out the grist of their fate.' (from "An Appeal to My Countrywomen") B. "When ye plead for the wrecked and fallen, / The exile from far-distant shores, 'Remember that men are still wasting/ Life's crimson around your own doors." (from "An Appeal to My Countrywomen") C. "Say not the age is hard and cold - I think it brave and grand; / When men of diverse sects and reeds! Are clasping hand in hand." (from "The Present Age") D. "God help our native land, / Bring sunrise to her strife, / And shower from thy hand/A more abundant life." (from "God Bless Our Native Land")

To measure whether countries in free trade agreements (FTAs) - agreements among nations to reduce tariffs, duties, and other trade barriers - experience changes in total agricultural exports, economist Kayode Ajewole and colleagues calculated average export growth rates for several countries over the five years before and the five years after entering an FTA with the United States. The graph shows the results for three countries in the study. Consulting the graph, a student claims that joining an FTA increases the rate of growth of a country's total agricultural exports. 'Which choice best describes data from the graph that weaken the student's claim? 'A. All the countries shown had positive growth in agricultural exports over the five years after joining their respective FTAs, but their rates of export growth varied. B. Although agricultural exports from Jordan decreased over the five years before JOFTA, a reversal in this trend was observed over the five years after Jordan joined JOFTA. C. Over the five years after Costa Rica joined CAFTA-DR, agricultural exports from Costa Rica grew at a rate of about 13.5 percent, which is higher than the rate over the five years before Costa Rica joined the agreement. D. Although agricultural exports from Morocco grew over the five years after Morocco joined MARTA, their growth rate was even higher in the five years before MAFTA.

Question 2

Source PDF page: 19

Gertrude Ederle, who was the first woman to swim across the English Channel, and Wanda Rutkiewicz, who was the first woman to summit K2 (the second tallest 'mountain in the world) are ensured lasting places in our historical memory. No matter 'what others may do in the future, nobody can ever these women as the first, to accomplish these feats 'Which choice completes the text with the most logical and precise word or phrase?

- A. stipulate B. induce supplant D. engender gang saaseensesmnam 17) During the 2007-2010 financial crisis, the United States furnished billions of dollars to selected countries' central banks via mechanisms called swap lines. Aditi Sahasrabudhe found that countries' policy environments seem 10 have been 'swap-line decisions: the probability that banks would be granted swap lines 'was 0.20 in countries open to foreign-capital inflows and 0.03 in countries with policies restricting such inflows. 'Which choice completes the text with the most logical and precise word or phrase? 'A, material
- B. predicated on
- C. decoupled from D. mediated by Rose BSeeRHEN a. RAGSRNARUAEH, hom SHH The Darlington is just one of approximately three million known historical shipwrecks spread throughout the world's oceans, and their impact on sea life and underwater ecosystems is of great interest to researchers, Rachel Moseley and colleagues were particularly curious about the effects of wooden shipwrecks on seafloor microbial communities. The researchers studied two wooden shipwrecks in the Gulf of Mexico by placing pieces of pine and oak between zero and 200 meters away from each shipwreck to collect samples of three kinds of microbes: bacteria, archaea, and fungi. They found that across the three microbial communities, peak diversity and richness was observed on pine and oak samples placed approximately 125 meters from the shipwrecks, 'Which choice best describes the overall structure of the text? 'A, TCintroduces a study of microbial communities near shipwrecks that has received significant scholarly attention, summarizes the results of that study, and then describes 'research team's reaction to the study. B. It states the number of known shipwrecks, describes the historical significance of 'one of those shipwrecks, and then comments on the various microbes found at the shipwreck site, . It names a famous historical shipwreck, describes the type of wood used to build that ship, and then explains how that wood type influences underwater microbial communities. D. It notes a general scientific interest in shipwrecks' ecological effects, describes a specific study related to that interest, and then states one of the study's findings. gene Rose BSeeRHEN ae RAGSRNARUAEH, hom SHH The following text is from Yung Wing's 1909 memoir My Life in China and America. 'Yung Wing was the first person from China to graduate from a US university. Little did I realize when in 1845 I wrote, while in the Morrison School, snposition on

"An Imaginary Voyage to New York and up the Hudson," that I was to see New York in reality. This incident leads me to the reflection that sometimes 'our imagination foreshadows what lies uppermost in our minds and brings possibilities within the sphere of realities. Which choice best describes the function of the underlined sentence in the text as a whole? A. It indicates Yang's unwillingness to distinguish between reality and fantasy as a child. B. It foreshadows Yung's future difficulties in publishing his writings. C. It describes an event in Yung's life that exemplifies a phenomenon. D. It illustrates the sense of adventure that Yung developed as a child.

gene Rose BSeeRHEN ae RAGSRNARUAEH, hom SHH Paintings by the Florida Highwaymen - an informal collective of prolific landscape artists active in Florida during the 1950s and '60s - are recognizable by their reiteration of the same general compositional structures and subjects: moonlit waters and poinciana trees, to name two. But there was room for individuation: Al Black's *Sunset Backwater Scene with Egrets*, for example, may resemble other Highwaymen paintings at first glance, but his works stand out for their comparative bleakness and minimalism. Which choice best describes the overall structure of the text? A. It describes an aesthetic framework shared by a particular group of artists and then makes and illustrates the claim that individuals introduced variations within that framework. B. It describes the common perception that a particular group of artists' works are derivative and then provides a specific piece of evidence that reinforces that perception. C. It explains how a particular group of artists began collaborating and then recounts how one member of that group became especially influential among them.

- D. It offers historical context that accounts for a particular group of artists' shared style and then indicates the circumstances under which several members of that group began exploring more unconventional themes.
- gene Rose BSeeRHEN ae RAGSRNARUAEH, hom SHH Text | is adapted from E. M. Forster's 1910 novel *Howards End*. Text 2 discusses *Howards End*. King's Cross and St. Pancras are adjacent railway terminals in London from which trains travel to the countryside. Text 1 To Margaret the station of King's Cross had always suggested infinity. Its very situation - withdrawn a little behind the facile splendours of St. Pancras - implied a comment on the materialism of life. Those two great arches, colourless, indifferent, shouldering between them an unlovely clock, were fit portals for some eternal adventure, whose issue might be prosperous, but would certainly not be expressed in the ordinary language of prosperity. Text 2 'The interplay between opposing ideological positions in *Howards End* is broadly articulated in the novel's organization of geographic space. On the one hand, the modern metropolis of London represents capitalism's emphasis on pragmatism and the accumulation of material wealth; on the other, the English countryside, accessible via King's Cross, fosters an idealism that values tradition, authentic personal connection, and the aesthetic - what the novel calls "the infinite." Based on the texts, the author of Text 2 would most likely agree with which statement about King's Cross, as it is depicted in Text 1? 'A. As a point of connection between London and the countryside, King's Cross suggests to Margaret the possibility of acquiring the intangible abundance promised by the kinds of authentic engagements that the novel's rural spaces seem to offer. B. Because it is situated at the beginning of Margaret's journey from the city to the country, King's Cross emblemizes the intrusion of the forces of materialism and 'modernity into the rural spaces that the novel associates with idealism and tradition. C. The austerity conveyed by King's Cross's appearance mirrors Margaret's disillusionment with the prospect of having authentic connections with other people in 'a world that chiefly values more conventional forms of prosperity.

Question 26

Source PDF page: 24

gene Rose BSeeRHEN ae RAGSRNARUAEH, hom SHH 12's Cross has a relatively unassuming appearance whose sharp contrast with the more aesthetically pleasing appearance of St. Pancras suggests to Margaret the ascendancy of the pragmatic capitalistic outlook among London's inhabitants. Though John Crowley, author of *Engine Summer*, is perhaps not as well known as the 'most commercially successful American writers of the past fifty years, his work has had several influential champions, including the poet John Hollander and the literary critic Harold Bloom. According to journalist Grace Wood, Bloom claimed to have read Crowley's novel *Little, Big* at least forty-six times, and in his posthumously published afterword to a 2022 edition of the book, Bloom rhetorically asked: "How 'many living authors of prose romance are universally relevant? Only Crowley." What is the main topic of the text? A. The similarities between the prose of John Crowley and the poetry of John Hollander. B. The characteristics of John Crowley's work that make it universally relevant. C. The reason why the work of John Crowley is not as commercially successful as it deserves to be. D. The reception of the work of John Crowley.

gene Rose BSeeRHEN ae RAGSRNARUAEH, hom SHH Minimum and Maximum Depths of Stony Coral Species in Caribbean and Indo-Pacific Waters 'Minimum depth | Maximum depth Species (eters) (meters) *Agaricia grahamae* 20 115 *Acropora stata* 1 2 *Danafingia* 1 n *seruposa* "eropora anthocercis 5 @ 'Some scientists have suggested that as ocean temperatures rise, many fish and corals found in the shallow zone (less than 30 meters below the surface) could take refuge in the cooler; darker mesophotic zone (30 to 150 meters below the surface). However, it isn't clear that all such species will be able to tolerate mesophotic conditions. In 2018, Hudson Pinheiro and colleagues studied stony corals in the two zones in Caribbean and Indo-Pacific waters. Based on the depths at which those corals are now found, the species that seems least suited to a full migration to the mesophotic zone is 'Which choice most effectively uses data from the table to complete the statement? A. *Agaricia grahamae*, because its minimum depth of 20 meters is in the shallow. B. *eropora anthocercis*, because its maximum depth of 10 meters is furthest from the mesophotic zone. C. *Acropora striata*, because its maximum depth of 25 meters is close to but doesn't reach the mesophotic zone. D. *Danafingia seruposa*, because its minimum depth of 1 meter is the shallowest of those listed.

gene Rose BSeeRHEN ae RAGSRNARUAEH, hom SHH Rafael Nimez and colleagues studied how members of the Yupno, an Indigenous group in Papua New Guinea, conceptualize time in both spoken language and gestures. The researchers recorded Yupno speakers explaining certain temporal words and phrases, such as *jave*, a past-oriented expression that translates to "day before yesterday," and coded each speaker's manual gestures. Previous research has found a tendency in many cultures to make temporal distinctions along imagined linear axes: for instance, Hebrew speakers often refer to the right/ left axis to describe events in time. Some researchers believe this tendency is universal, but Nitiez and colleagues

claim this is not the case. Which finding, if true, would most directly support Niñez and colleagues' claim?

- A. Yupno speakers typically use their left hand to make temporal gestures regardless of whether the gestures are past oriented or future oriented B. Future-oriented gestures used by Yupno speakers do not, on average, point in the opposite linear direction of past-oriented gestures. C. Some Yupno grammatical structures used when talking about time are also used in Hebrew. D. Yupno speakers were observed making temporal gestures both indoors and outdoors, though with greater frequency when indoors. gang saaseensesmnam 17) Researchers investigated how enjoyment of a story is affected when it has been spoiled (when the reader has foreknowledge of an important plot development). As part of the study, participants rated their enjoyment of one story that was spoiled before they read it and one story that was unspoiled. For each story, participants who had been given a spoiler reported greater enjoyment than did those who hadn't received a spoiler. But the degree of this difference varied across the stories, as is best illustrated by the enjoyment ratings for 'Which choice most effectively uses data from the graph to complete the statement? 'A. "Owl Creek Bridge" and "A Chess Problem."
- B. "The Calm" and
- C. "Blitzed" and "Plumbing." D. "Blitzed" and "A Chess Problem." tumbing." Rose BSeeRHEN a. RAGSRNARUAEH, hom SHH Piezoelectric harvesters convert kinetic energy (resonance) to electrical energy precluding the need for external electrical sources. The vibration of a spacecraft, for example, can provide sufficient energy to power many of its sensors piezoelectrically. A newly designed piezoelectric harvester incorporating a highly conductive carbon-fiber-reinforced polymer (CFRP) electrode has been shown to provide steady energy loads during resonance, an absolute prerequisite for wireless communication devices to be powered piezoelectrically. Which finding, if true, would most directly support the text's claim about wireless communication devices? A. Intermittent or unpredictable electrical supply undermines the efficacy of wireless communication devices, B. The near-constant kinetic vibration of a spacecraft makes it possible to power its wireless communication devices using only non-CFRP piezoelectric harvesters, CC. The CFRP electrode is incompatible with most wireless communication devices. D. The high conductivity of the CFRP is what makes the energy output from a piezoelectric harvester sufficient for wireless communication devices. gang saaseensesmnam 17) RAGSRNARUAEH, hom SHH Like many other genera of wild bees, bumblebees have in recent decades experienced population collapse caused by, among other factors, habitat destruction and climate variation. Bumblebees are also one of the most researched bee genera, second only to honeybees. As a result, ecologists have gained much of their insight about wild-bee declines from bumblebees. In a 2021 paper, zoologist Guillaume Ghisbain notes that bumblebees are among the relatively few wild-bee genera that display social behaviors and dietary generalism (ability to obtain nectar and pollen from a diversity of plant species), two traits that are associated with increased resilience to some specific environmental changes. Ghisbain therefore contends that, 'Which choice most logically completes the text? 'A. because bumblebees and other bees with generalist diets are less negatively affected by environmental stress than bees with specialized diets are, they are less likely to experience major population changes in the future than bees with specialized diets are. B. although bumblebees have been more extensively studied than most wild bees, researchers should not use bumblebees to draw conclusions about the decline of other wild bees, even ones with feeding patterns and levels of sociability that are similar to those of bumblebees. . although bumblebees and many other wild bees have experienced similar population declines in the past, compared with other wild bees, bumblebees are likely at greater risk of being harmed by climate variation than by habitat destruction.
- D. because the responses of bumblebees and other wild bees to environmental threats are not always comparable, researchers need to exercise caution when extrapolating information about wild-bee population declines from bumblebees.

Question 2

Source PDF page: 30

gene Rose BSeeRHEN a. RAGSRNARUAEH, hom SHH Microbial fuel cells (MFCs) capitalize on the ability of some species of bacteria to metabolize metal, liberating electrons. The bacteria form a dense biofilm on the surface of an electron-collecting anode, but moving the electrons from the bacterial cytoplasm to an external electrode requires that the electrons pass through a series of inefficient oxidation-reduction (redox) reactions. Accordingly, MFC power output rarely exceeds a density of 0.30 milliwatts per square centimeter (mW/cm²). In an experiment, researchers added silver nanoparticles to carbon paper covering the anode in an MFC. The resulting power density was 0.66 mW/cm². Since metals such as silver exhibit high electrical conductivity, the researchers hypothesized that 'Which choice most logically completes the text? 'A. silver nanoparticles may increase the metabolic processes of the bacteria, thereby increasing the number of free electrons available to transfer to the electrode, B. as the density of the biofilm increases, the series of redox reactions may accelerate independent of the presence of the silver nanoparticles. . silver nanoparticles may allow electrons to bypass the series of redox reactions and transfer directly to the electrode, D. electrons may be conducted directly to the electrode before the silver nanoparticles catalyze the redox reactions.

- A. [choice text not detected]
B. [choice text not detected]
C. [choice text not detected]
D. [choice text not detected]

Question 3

Source PDF page: 31

gang saaseensesmnam 17) RAGSRNARUAEH, hom SHH 'The ratio of methane to other atmospheric constituents - represented by a measure called the methane mole fraction - influences a variety of meteorological phenomena, notably precipitation and humidity. For Titan, Saturn's largest moon, the observational data that exist are too sparse and discrepant to fully constrain the range of the methane 'mole fraction at various atmospheric levels. Juan Lora and colleagues point out that outputs of the IPSL. atmospheric model of Titan, which track closely to observations in some respects, reflect how the model's developers responded to this challenge: by prescribing a uniform methane mole fraction for the lowest level of the atmosphere. It is therefore important to note that 'Which choice most logically completes the text? 'A. some disagreements between the model's simulations of Tian's precipitation and humidity and the moon's actual precipitation and humidity are to be expected, B, oven though the model's outputs sometimes agree with ebservational data, Titan's real methane mole fraction is likely higher than the methane mole fraction used in the model C. farther observations of Titan may clarify the moon's methane mole fraction sufficiently for the model to employ a single value rather than a range. D. inconsistencies across the model's simulations of Titan's precipitation and humidity could be attributable to variations in the moon's methane mole fraction, gene Rose BSeeRHEN ae

'As can be seen in the case of ublius" - a pseudonym adopted by a trio of writers that included Alexander Hamilton - historians have deduced the likely authorship of 'many pseudonymous political essays published in the years following the American Revolutionary War; pen names such as "Democritus" and "Obadiah Spriggins." remain as elusive as they once were to eighteenth-century audiences. 'Which choice completes the text with the most logical transition? A. indeed, B. though, . Tikewise, D. forexample, gene Rose BSeeRHEN ae RAGSRNARUA EH, hom SHH 'While researching a topic, a student has taken the following notes: + Documentary TV programs in the slow TV genre consist of uninterrupted broadcasts of ordinary events in real time, + Flamsbanas Minutt for Miautt (running time:1 hour) is a Norwegian slow TV program that aired in 2010, + It documented a train ride from Myrdal station down to Flim. + Hilma 247 (running time:12 hours) is a Finnish slow TV program that aired

in 2017. + It documented a supermarket checkout aisle of the Prisma Kaari grocery store. 'The student wants to emphasize a similarity between the two TV programs. Which choice most effectively uses relevant information from the notes to accomplish this goal? A. While *Flåmsbana: Minutt for Minutt* depicts < train ride from Myrdal station down to Flåm, *Hilina 247* depicts a supermarket checkout aisle of the Prisma Kaari grocery store B. Documenting ordinary events in real time, *Flåmsbana: Minutt for Minutt* and *Hilina 247* are both documentary programs in the slow TV genre, ©. Com *Minutt for Minutt* is relatively short, at 1 hour, but the 12-hour-long *Hilina 247*, the slow TV program *Flåmsbana: D. A* prime example of the slow TV genre can be seen in *Flåmsbana: Minutt for Minutt*, a 1-hour Norwegian TV documentary program documenting & train ride from 'Myrdal station down to Flåm, gene Rose BSeeRHEN ae RAGSRNARUA EH, hom SHH 'While researching a topic, a student has taken the following notes: + In a 2004 study, researchers Jorge E. Lopez and C. Vaughan wanted to explore the effects of ingestion by bats on the germination of *Piper sanctifelicis* seeds in Costa Rica, + The team of researchers tested 125 *Piper sanctifelicis* seeds that had been ingested by chestnut short-tailed bats + Of these, 82 seeds (66%) germinated, + As a control, J. E. Lopez and C. Vaughan tested 125 *Piper sanctifelicis* seeds that had not been ingested by chestnut short-tailed bats, + Of these, 88 seeds (70%) germinated, 'The student wants to describe the study's research methodology. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. J. B. Lopez and C. Vaughan wanted to explore the effects of chestnut short-tailed B. In the study, a lower percentage of *Piper sanctifelicis* seeds ingested by bats 'germinated than those that had not been ingested by bats C. The team of researchers tested the germination of 125 *Piper sanctifelicis* seeds that had been ingested by chestnut short-tailed bats and 125 *Piper sanctifelicis* seeds 'that had not been ingested. D. Research by J. E. Lopez and C. Vaughan revealed that 82 of 125 - that is, (66% - of the *Piper sanctifelicis* seeds that had been ingested by the bats germinated (see question 17) RAGSRNARUA EH, hom SHH 'While researching a topic, a student has taken the following notes: + Modularity of mind is the notion that the mind is at least partly composed of innate neural structures (modules) that perform fast, necessary tasks, + 1983: cognitive scientist Jerry A. Fodor hypothesized that low-level cognitive systems (e.g., perception, language) are modular. + In Fodorian modularity, high-level systems (e.g., reasoning) are not modular. + 2003: cognitive scientist Peter Carruthers proposed the massive modularity hypothesis (MMH), '+ MMH expands modularity to include all cognitive systems, 'The student wants to compare Fodor's hypothesis with Carruthers's. Which choice 'most effectively uses relevant information from the notes to accomplish this goal? 'A. In considering some but not all cognitive systems modular, Fodorian modularity is not as expansive in its definition of modularity as MMH is,

B. Following Fodor's 1983 hypothesis, Carruthers proposed that modularity of mind includes all cognitive systems.

C. The hypotheses of Fodor and Carruthers differ in whether they consider low-level cognitive systems, such as perception and language, modular D. In 2003, Carruthers proposed the massive modularity hypothesis, disagreeing 'with Fodor's earlier hypothesis that the mind is composed of innate neural structures. gene Rose BSeeRHEN ae RAGSRNARUA EH, hom SHH 'While researching a topic, a student has taken the following notes: + Digital Light Synthesis (DLS) is a form of additive manufacturing that utilizes light to rapidly cure liquid resin into high-quality, 3D objects, + Step 1: Ultraviolet (UV) light images are projected up into a pool of liquid resin, where the object's first layer takes shape. + Step 2: The partially cured resin object is raised, leaving a thin space (a "dead zone") beneath it for oxygen and liquid resin to flow through. + Step 3: The UV light passes through the dead zone - maintaining the flow of resin - and partially cures additional layers of the object. + Step 4: When the resin object is complete, it is baked in an oven to complete the curing. 'The student wants to describe how DLS cures 3D objects, Which choice most effectively uses relevant information from the notes to accomplish this goal? A. DLS cures 3D objects by passing through a "dead zone," adding layers to the 'object, then curing the object in an oven. B. In DLS, UV light is projected into layers of liquid resin until the resin solidifies and passes through a "dead zone," when the curing is completed. CC. In DLS, UV light images are projected into a liquid resin pool to cure a 3D object layer by layer; once solidified, the object is baked in an oven.

D. DLS is a form of additive manufacturing that creates a "dead zone" in which UV light solidifies layer by layer before being baked in an oven, creating @ high-quality, 3D object. (see question 17)
