Question 3

Source PDF page: 3

'The 1978 recording "Two Doors Down" established Dolly Parton as a key figure in 'pop music. But before she dabbled in pop, her singing and songwriting had been ____ the traditional folk: music of the Appalachian Mountains. For example, "Little Bird," one of her best early songs, is clearly influenced by the phrasing and subject, 'matter of Appalachian ballads. Which choice completes the text with the most logical and precise word or phrase? A hostile B rooted in C unaware of D helpful to 'The traditional Puerto Rican dish mofongo, characterized broadly by its base of mashed plantains, is often ____ in its preparation and serving style. Coastal families typically serve it with fresh-caught octopus and shrimp, mountain families tend to prepare it with chicharrones, and restaurant chefs in San Juan explore innovations like topping the dish with guarapo (juice from sugarcane). Which choice completes the text with the most logical and precise word or phrase?

- A. meticulous
- B. seasonal
- C. localized
- D. proprietary

Question 5

Source PDF page: 4

Hawai'i has a rich literary history that originated with the traditional stories of the Ka naka Maoli, or the Native Hawaiian people. Anwehi Skinsnes Law, Imaikalani Kalahele, and other writers have built on this tradition and brought Hawaiian literature to international prominence, the manifold experiences of the Hawaiian people for readers around the world, Which choice completes the text with the most logical and precise word or phrase? A exercising B illuminating C controlling D presupposing People tend to assume that being happy is the ideal emotional state and should be 'ongoing aspiration; recently, however, research has suggested that it is a times beneficial to embrace negative emotions. To test whether anger can contribute to problem-solving abilities, researcher Heather Lench led an experiment in which participants were randomly assigned to view images designed to create an emotional condition - either neutral or one of anger, amusement, desire, or sadness. When asked to then solve a series of challenging puzzles, the participants in the anger condition had greater success than those in the other conditions, Which choice best describes the function of the underlined portion in the text as a whole? 'A It describes a general psychological tendency that the study discussed in the text 'was designed to explain. B It establishes a psychological basis for the behaviors of the participants in the experiment reported in the text, C It explains an assumption underlying the hypothesis investigated in the study discussed in the text. D It notes a generally accepted belief that is called into question by a finding of the experiment outlined in the text.

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 1

Source PDF page: 5

Text 1 France has long used gross domestic product (GDP), the market value of the goods and services produced in a given period, as a key metric for national progress and 'well-being. Although GDP has value as an economic metric, myriad other factors influence people's quality of life to varying degrees, and it would be wrong to assume that a rising GDP necessarily equates to increasing societal well-being. Text 2 Recognizing that a country's progress rests on both economic and noneconomic factors, in 2011 a government agency in the United Kingdom began surveying citizens to gauge quality of life. By assessing indicators in multiple domains - such as social relationships and professional and community activity - rather than relying solely on GDP, the United Kingdom gains a truer understanding of its national well-being. Based on the texts, the author of Text 1 would most likely agree with which statement about "social relationships" and "professional and community activity," mentioned in Text 2? 'A They may not correlate with GDP as well in France as they do in the United Kingdom. B They are a better metric of economic activity in the United Kingdom than GDP is. C They have been a standard factor addressed in France's evaluation of national well-being. D They may be important influences on

the well-being of people in France as well as

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 8

Source PDF page: 6

'The following text is from an 1894 translation of Alexandre Dumas's 1844 novel *The Count of Monte-Cristo*. Dantes is searching for a treasure and finds a cave whose 'opening has been deliberately blocked by a large rock. Hercules is a hero of Greek mythology Dant é s dug away the earth carefully, and detected, or fancied he detected, the ingenious anifice. He attacked this wall, cemented by the hand of time, with his, pickaxe. After ten minute' labor the wall gave way, and a hole large enough to insert the arm was opened. Dant é s went and cut the strongest olive-tree he could find, stripped off its branches, inserted it inthe hole, and used itas a lever. But the rock was too heavy, and too fimy wedged, to be moved by any one man, were he Hercules himself 'Which statement about Dantes is best supported by the text? 'AHe is determined in his efforts to move the rock away from the opening of the cave B He is worried he will lack the courage to enter the cave when the entrance is finally 'opened, C He is unsure why the cave's opening was purposely hidden behind a wall and a large rock: D He is aware that his impatience is causing him to make clumsy errors as he enlarges the hole in the wall 'The following text is adapted from Maria Amparo Ruiz de Burton's 1885 novel *The 'Squatter and the Don*. Mercedes and Clarence, who develop a romantic relationship in the novel, have been traveling with a group of friends. [Mercedes] was still very pale, and her hands yet trembled, when the thundering, 'of the east-bound train was heard in the distance, Two shieks pierced the air simultaneously, as the two trains passed each other. Her heart gave accelerated throbs when she heard those shrieks, because she knew that one of them came from the train which bore Clarence away, and it seemed to her as ifexpressive of his pain at being tom from her. Yes, that magician, the locomotive, understood it all, and shrieked to say he did so, beecause he knew she, 100, wished to shriek like that 'Which choice best states the main idea of the text? A Mercedes shares a passion for locomotive travel with Clarence, B The sounds at the train station irritate Mercedes. Clarence boarded his train at the last minute D Mercedes feels heartbroken to be separated from Clarence.

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 10

Source PDF page: 7

In her book *Limitarianism*, researcher Ingrid Robeyns criticizes economic policies that allow businesses to profit from their suecesses while displacing the burden of failure onto taxpayers. As an example she cites the US financial crisis of 2008 in 'which dozens of institutions including JPMorgan Chase and SunTrust received a collective \$700 billion of government support. Had the US government previously exercised stricter regulation of risky financial instruments, Robeyns argues, this, 'enormous expenditure of taxpayer dollars would not have been necessary Which choice best states the main topic of the text? A Consequences of the 2008 financial erisis for JPMorgan Chase and SunTrust B How the US government used money received from taxation to help institutions recover froma period of financial instability € Techniques of assessing the risks of particular methods of financial investment D Why a scholar believes it would be beneficial for certain governmental economic practices to be reconsidered sane sansnasesanom ER Brown Bears in Katmai National Park, Alaska Bear identification Sex 'Age (years) Approximate number 'weight (pounds) 161 Female 8 300 17 female 4 225 Tor emale iW 5 7 'male 15 930 Scientists collected information about brown bears in Katmai National Park in Alaska, This information included each bear's sex, age, and approximate weight, For the bear with identification number 137, for example, the scientists recorded that the bear was Which choice most effectively uses data from the table to complete the statement? 'A female, 4 years old, and weighed approximately 225 pounds. B female, 8 years old, and weighed approximately 300 pounds. 'C male, 15 years old, and weighed approximately 950 pounds, D female, 14 years old, and weighed approximately 425 pounds.

Effect of Neighboring Species by Type on Target Species 'Neighboring Neighboring. "Target species Effect value species species type Viper's-bugloss butterfly flower "03312 purple loosestrife invasive 'winged loosestrife 2M Virginia spring native Star chickweed 0.8674 beauty Canadian wood native mayapple 04729 betony Researchers Carolina Laura Morales and Anna Traveset gathered data about flowering, plants growing alongside each other in various locations. In each case, the researchers identified one plant as a "target species" and a nearby plant as a "neighboring species." The researchers then calculated a value to show how the neighboring species affected pollinator visits to the target species. A negative effect value indicates that the neighboring species had a harmful effect on the target species. The researchers 'concluded that invasive species were detrimental to target species, 'Which choice best describes data from the table that support the researchers' conclusion? 'A Both invasive species in the table have negative effect values. B Only one invasive species in the table has a negative effect value C Only one invasive species in the table has a positive effect value, Both invasive species in the table have positive effect values, same sep reBSSsRNR 8 i

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 14

Source PDF page: 10

In the early 1970s, art historian Michael Baxandall created an approach to viewing art called the "period eye," which explains how to look at art through the lens of its historical period. Baxandall argued that it is critical that art historians understand and communicate the original social and cultural contexts of older works of art so that they learn what the artists intended and how the pieces would have been understood by their original viewers. Since it was first introduced, Baxandall's period eye has significantly influenced the practice of art history 'Which finding about art historians, if true, would most directly support the underlined statement? 'A Many art historians working before the 1970s produced detailed analyses of the social and cultural contexts of older artworks, though few extended that approach to artworks produced in their own lifetimes, B For some historical periods, it is difficult for art historians to reconstruct how the original viewers of artworks understood what artists' intentions for their works were. C Art historians working today have largely rejected the idea, common among Baxandall's predecessors, that artists' intentions should influence how artworks are interpreted D Numerous art historians of the late twentieth century and twenty-first century have focused their scholarship on how various artworks were interpreted at the time of their creation Accurately measuring the sizes of marine fish populations is challenging because predation, reproduction, and fishing are constantly affecting those populations" 'numbers. To avoid overfishing, many commercial fishers rely on complex computer 'models that estimate current and historical fish population sizes, These models incorporate various biological factors, such as fish size, age distribution, and reproductive rates, Recently, a team of researchers examined decades of modeled predictions for 230 major commercially fished species. They discovered that the 'models often overestimated fish population sizes, And contrary to their expectations, the researchers found that accuracy did not improve as the data grew over time. The team's discovery most directly suggests that Which choice most logically completes the text?

- A. it is important to incorporate more diverse data sources, including commercial fishers' observations, into population size models,
- B. researchers should be cautious when considering findings about commercially fished populations that predate the development of the models,
- C. some commercial fishers have likely been unknowingly overfishing and may need to decrease their catches going forward

D. environmental factors, rather than commercial fish population declines in marine species, are the primary cause of

Question 16

Source PDF page: 12

Some geologists have proposed designating the period from 1950 to the present as a new geological epoch (the Anthropocene) characterized by human impact on Earth, but they have struggled to identify reliable stratigraphic markers of the epoch's onset. Ina Dimante-Deimantovica and a research team investigated whether the initial appearance of primary microplasties - invented and mass-produced for industrial and 'other purposes, beginning around the middle of the twentieth century - in sedimentary layers could serve this role. The researchers analyzed European lake sediment profiles from the late eighteenth century to the present. Microplasties were present in all layers, likely because certain microplastic shapes enabled rapid downward migration. The researchers therefore concluded that Which choice most logically completes the text? 'A microplasties are not prevalent enough in sediment to serve as a reliable sign of the human impact characteristic of the Anthropocene. B using the earliest presence of microplasties as a stratigraphic marker of the beginning of the Anthropocene is likely to be viable in some locations but is not viable in Europe C the lowest sedimentary layer in which microplasties are found cannot be treated as indicative of the chronological beginning of the Anthropocene. D the presence of microplasties in sediment dating to the late eighteenth century suggests that the Anthropocene began earlier than previously thought.

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]

Source PDF page: 15

For millennia, acorns were a staple food for the Toneva people, the Indigenous inhabitants of what is now the Los Angeles basin, Raw acorns have an extremely bitter taste, though, due to their high tannin levels. it was necessary to process the acoms - which involved grinding, rinsing, and shaping the nuts into a dough - before eating them. Which choice completes the text with the most logical transition?

- A. However, B Afterward, € Similarly, D Therefore W's tempting to think that the comic strips Jump Start and Hee Pals have the same main purpose - to amuse - because both feature humorous situations Wee Pals focuses just as much on challenging readers with sociopolitical commentary as it ddoes on making them laugh, 'Which choice completes the text with the most logical transition? Another words,

- B. Likewise,
- C. Next
- D. In reality

Question 25

Source PDF page: 16

'While researching a topic, a student has taken the following notes: + There are around 90 automated snow measurement sites in Wyoming + One site is at Cloud Peak Reservoir + At the start of February 2021, the site's snow depth was 46 inches, + At the start of March 2021, the site's snow depth was 31 inches, 'The student wants to specify the snow depth at Cloud Peak Reservoir at the start of March 2021. Which choice most effectively uses relevant information from the notes to accomplish this goal? A At the Cloud Peak Reservoir site, there were 46 inches of snow on the ground at the start of February 2021 B At the start of March 2021, 31 inches of snow covered the ground at the Cloud Peak Reservoir site C Located in Wyoming, the Cloud Peak Reservoir site monitors snow conditions, such as snow depth, D In 2021, the site at Cloud Peak Reservoir was one of about 90 automated snow measurement stations in Wyoming,

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 26

Source PDF page: 16

"India Arie is an African American singer and songwriter. "The media outlet BBC Music has described her music as a "blend of hip hop, soul and folk {that is} as subtle as it [is] inspired." *Her first studio album, Acoustic Soul, was released in 2001. "It features the song "Strength, Courage & Wisdom." + Avery Johnson played bass on the album, Which choice most effectively uses information from the given sentences to introduce Acoustic Soul to an audience already familiar with India Arie? A Avery Johnson played bass on singer and songwriter India Arie's 2001 album, Acoustic Soul. B India Arie's music has been described as a "blend of hip hop, soul and folk (that is) as subtle as it [is] inspired." Featuring the song "Strength, Courage & Wisdom," Acoustic Soul is India Arie's first studio album. D "Strength, Courage & Wisdom," a song by singer and songwriter India Arie, is featured on the album Acoustic Soul

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 21

'While researching a topic, a student has taken the following notes: + The capital of Ethiopia is Addis Ababa, + The largest city in Ethiopia by population is Addis Ababa + The capital of Kazakhstan is Nur-Sultan, + The largest city in Kazakhstan by population is Almaty, 'The student wants to make a generalization about capital cities, Which choice most effectively uses relevant information from the notes to accomplish this goal? A A country's capital city is not always the country's most populous city B Nur-Sultan, not Almaty, is the capital of Kazakhstan, C Almaty and Nur-Sultan are both cities in Kazakhstan D The capital of Kazakhstan is Nur-Sultan, while the capital of Ethiopia is Addis Ababa,

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Reading and Writing Module 2

Question 2

Source PDF page: 18

Ethicist Ingrid Robeyns argues that to minimize wealth inequality, there should be a legally enforceable upper limit on the wealth one person can hold, Robeyns concedes that some _____ in wealth should be tolerated - for example, some jobs are more dangerous than others, and those jobs should therefore earn a higher income than others. But this is not a license for limitless wealth inequality. Which choice completes the text with the most logical and precise word or phrase? A disparity B security C confidentiality D assurances

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 3

Source PDF page: 19

Because it appears merely to reflect and rearrange the creative labor of human artists, art generated by artificial intelligence programs has been scorned by some as hackneyed. One can also argue, however, that all art is in some sense hackneyed because it draws on what has already been created by others for inspiration, making genuine artistic originality elusive. Which choice completes the text with the most logical and precise word or phrase? A obsolete B aesthetic C counterproductive D derivative Recitals by Catherine Kautsky, known for her virtuosity on the piano, are described as given that they can feature not just the performance of a musical piece but also a lecture on the piece's composer and a slideshow contextualizing the time in which it was composed. Which choice completes the text with the most logical and precise word or phrase?

- A. multifaceted
- B. circumscribed
- C. exuberant
- D. undiscerning

Question 5

Source PDF page: 20

On receiving good news, people's first instinct might be to immediately share it, but a recent experiment suggests that keeping it a secret can be psychologically beneficial. Study participants were randomly assigned to reflect on an experience in which they either shared good news or kept it to themselves. On average, those who kept good news secret reported feeling more energized by the experience than participants who shared did, perhaps, as the researchers suggest, because the choice to savor good news is usually a personal one and autonomous motivation is linked with feelings of vitality. Which choice best describes the function of the underlined portion in the text as a whole? At present, a scenario whose psychological impact was investigated in the study summarized in the text B It indicates a reason why skepticism about the conclusions of the psychological study mentioned in the text is likely warranted C It reports the main conclusion of a study into a social phenomenon whose methodology is critiqued in the text D It provides an observation about human behavior that was validated by the experiment summarized in the text

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 6

Source PDF page: 21

Alternative-history fiction is a subgenre of science fiction in which plots center on "what if?" questions. What if India had started the Industrial Revolution? What if Soviet cosmonauts had been first to land on the moon? Speculative counterfactuals, like these, can be great fodder for stories, but they're also commonly deployed by academic historians to better understand factors influencing historical events. Well-realized and coherent alternative-history stories can thus complement historians' speculations about the past. Which choice best describes the function of the underlined portion in the text as a whole? A It provides examples of the types of scenarios addressed in alternative-history fiction B Illustrates how academic historians have influenced writers of alternative-history fiction C It indicates specific ideas that were first raised by writers of alternative-history fiction D It provides a definition of alternative-history fiction

fiction and that subsequently inspired scholarship by academic historians, D It acknowledges counterfactual questions that academic historians have largely overlooked

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 1

Source PDF page: 22

Since 2012, a consortium of research institutions has released! an annual report that ranks countries by their populations' well-being, which the authors of the report derive using data from a globally administered survey of respondents" selfassessed levels of happiness. However, some other scholars caution that this approach reflects a tendentious understanding of the relationship between these two metrics, For 'example, studies have revealed a tendeney among people in some non-Western countries to regard individual happiness as less important (o their well-being than other ideals (¢ g., a sense of harmony or balance), Based on the text, what is potential weakness ofthe annual report issued by the consortium of research institutions? At includes survey data from a wide range of Westen countries but only from a narrow set of non-Western counties, B It overlooks how philosophies regarding a particular concept have evolved over time, C It may not adequately account for cultura variations in the value attached to a particular concept. D Itrelies on survey responses from participants who may not be representative of their countries" cultural norms,

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 8

Source PDF page: 23

'While no one doubts that politicians are influenced by a variety of incentives, itis 'generally agreed that they seek to support policies their constituents favor - after all, they risk losing office ifthey do not. Direct contact with constituents via such means, as public events and emails from voters is a major source of politicians" beliefs about their constituents' views, but itis susceptible (0 a selection effect, There is little reason {0 presume that individuals with the time, resources, and strength of feeling to directly engage with their representatives are themselves broadly representative, 'Which choice best states the main idea of the text? A People who are likely to contact their elected representatives do not tend to be representative of politicians" constituents generally. B Direct contact with constituents shapes politicians" beliefs about policies their constituents favor, and they try 1 act in accordance with those belief € Politicians aim to advocate for their constituents' policy preferences, but politicians" understanding of those preferences may be skewed, D Although politicians have an incentive to act in accordance with their constituents" 'views, that is not the only incentive they have to consider when deciding which policies to support,

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 9

Source PDF page: 24

Readers sometimes divide the works of twentieth-century English author Evelyn Waugh into two periods: one consisting of his early satirical novels and the other consisting of his lat fen ponderous - books, Critic Seamus Perry however, challenges that strict division. Perry argues that Waugh's writing didn't change over time as much as some readers have suggested, For instance, Perry contends that some of Waugh's earliest works, notably his biography of artist Dante Gabriel Rossetti, exhibit the eamest romanticism that would characterize Waugh's later fietion. Based on the text, which statement about Waugh's works would Perry most likely agree with? 'A Regardless of when they were written, Waugh's works have important similarities that transcend their differences. B Over time, Waugh's works became less humorous and more focused on weightier topics. C Waugh's works can appropriately be separated into two periods by thei 'matter and tone. D The eauliest of Waugh's works exhibit a satirical tone, even if that tone is more apparent in Waugh's later works, subject

- A. [choice text not detected]

- C. [choice text not detected]
- D. [choice text not detected]

Question 10

Source PDF page: 25

In a study of perceptions of listening ability, participants explained their position on a sociopolitical issue and then received a listener's written summary that expressed agreement or disagreement. Within selected summaries, researchers embedded 'markers of attentive listening (e.g., references to specific details), hypothesizing that such indications would positively influence perceptions of listening skill even in the context of disagreement. Instead, participants consistently rated listeners who expressed disagreement as less skilled, regardless of the other traits of the listeners' summaries. What does the text most strongly imply about how participants responded to expressions of disagreement? 'A Although participants were critical of expressions of disagreement, they gave higher ratings to listeners whose summaries included markers of attentiveness than to listeners whose summaries did not include these markers. B Although participants maintained their positions regardless of a summary's level of detail, they tended to regard listeners who expressed disagreement as more attentive 'when these listeners provided more detailed summaries. C When participants felt personally invested in the topics they discussed, they were less likely to perceive listeners who expressed disagreement as attentive, regardless of evidence to the contrary in these listeners' summaries. D When participants encountered summaries from listeners who expressed disagreement with their views, participants tended to disregard evidence that the listeners had in fact been attentive. 'The interiors of many temples in the ancient Middle East needed to satisfy a precise set of acoustic demands: the sounds of chants and hymns should travel with clarity, 'while profound silences should be fully felt and appreciated. In a research paper, a student claims that the users of one such temple were aware of how the materials that 'were used within the structure could affect sound quality and that they deliberately applied this knowledge (to influence how sound was experienced in the space, 'Which quotation from a work by a historian would most directly support the student's A "The acoustic environment of the temple was best suited for music that eschewed 'ornamentation in favor of simple melodies, harmonies, and rhythms." B "Many researchers believe that the central chamber of the temple had a high ceiling feature that has since become essential to the acoustic design of modern concert halls. C "During special occasions, curtains were placed inside the temple to minimize reverberation and confine the sound to designated locations." "The innermost room of the temple was likely among the quietest spaces in the interior of the temple."

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 12

Source PDF page: 27

'Throughout history, tall structures such as Ruwanwelisaya in Sri Lanka or the Minarets of Selimiye Mosque in Turkey have posed a challenge to their architects, since these structures are more susceptible to physical forces than smaller structures. For example, the lower floors of a building must be able to support the enormous 'weight of the upper floors. To test a hypothesis that steel is more suitable than concrete for construction of tall buildings' lower floors, researchers created a 'computer model of two buildings that were identical except that one had concrete lower floors while one had steel lower floors, and simulated the effects of the forces 'of wind and gravity on those structures over the course of a century. Which finding from the simulation, if true, would most directly support the researchers' hypothesis?

- A. At the end of the simulation, the structure with steel lower floors had slightly larger dimensions at its base than it did at the beginning of the simulation,
- B. During the simulation, the structure with steel lower floors bent in high wind to a 'greater degree than did the structure with concrete lower floors,
- C. During the simulation, when sudden forces caused vibrations in the structures, those vibrations took longer to disappear in the structure with steel lower floors than in the structure with concrete lower floors.
- D. At the end of the simulation, the structure with concrete lower floors was several inches shorter than the structure with steel lower floors

Question 13

Source PDF page: 28

Form 4720s Fed by Private Foundations, While US public charities, like Commonfund, must file Form 990 yearly with the IRS, private foundations, such as the David and Lucile Packard Foundation, must file a different form, 990-PF. In addition, foundations that engage in certain prohibited activities must also file Form 4720 and pay a penalty tax on the money involved Private foundations are prohibited from holding excess interests in a business enterprise, "self-dealing" (conducting activities that benefit foundation insiders), "making taxable expenditures such as outlays for lobbying, and failing to cross a 'equited threshold in making charitable distributions from income. Out of the 'organizations that filed Form 990-PF in the years 2003-200: Which choice most effectively uses data from the graph to complete the assertion? A a greater percentage of those that also filed Form 4720 did so because they held excess interests in a business enterprise than the percentage of those that filed Form 4720 because they did not meet the minimum charitable distribution requirement B, more of those that also filed Form 4720 failed to meet a minimum charitable distribution requirement than did those organizations that filed Form 990 but also filed Form 4720 for the same reason those that were also required to file Form 4720 because they had excess holdings in a business enterprise paid, on average, a significantly smaller penalty than those 'organizations that filed Form 4720 because they engaged in self-dealing D. those that were also required to file Form 4720 were more likely to do so because they did not meet the minimum charitable distribution requirement than for other sane sansnasesanom ER 'There is a growing belief that teaching medical students about art alongside standard, science and clinical coursework helps them become more observant, develop greater patient empathy, and strengthen their communication skills, But some medical program educators are skeptical, questioning if arts and humanities experiences can be clearly shown to have any worthwhile advantages for their students. Research into the effectiveness of arts programs for medical students by Neha Mukunda and her colleagues found that evidence is largely anecdotal and based on studies that were short in duration, limited to single institutions, or restricted to small numbers of students, To strengthen the evidence base in support of incorporating humanities into the coursework for medical students, then, 'Which choice most logically completes the text?

- A. researchers must prove that scientific training alone is insufficient for developing clinical skills,
- B. larger-scale, multi-institutional research studies tracking outcomes for medical students over longer periods are needed.
- C. medical schools should highlight more student testimonials about how arts education benefits their clinical abilities. D institutions may need to provide medical students with exposure to larger numbers of artworks than have been used in previous studies. 'Some farms are expanding their mix of crop species in an effort to reduce 'nonagricultural biodiversity loss caused by increasing agricultural specialization, in 'which farmers focus on a limited range of crops or livestock species to improve yields and, thus, their revenues. To study the joint environmental and economic effects of diversification practices (which can encompass improved soil and water management as well as increased variety in crops and livestock), Laura Vang Rasmussen and team analyzed data from 2,655 farms in eleven countries. They found that using multiple diversification practices concurrently had greater potential for improving both 'nonagricultural biodiversity and yields than using a single strategy did. Their finding suggests that Which choice most logically completes the text? A farmers who focus primarily on increasing crop variety without engaging in other diversification practices will likely help reverse nonagricultural biodiversity loss, but their farms will produce smaller yields than if they had continued to focus on developing a single crop, B it is more expensive to increase crop variety while simultaneously implementing 'ther diversification practices than it is to increase crop variety and then subsequently implement other diversification practices, farmers who are reluctant to switch from specializing in a single crop to cultivating a variety of crops incorrectly assume that any improvements in yields will be insufficient to offset the costs associated with making that transition,
- D. agricultural diversification doesn't inherently involve a trade-off between environmental and economic considerations, but farmers' chances of avoiding that 'outcome may be diminished if they focus on crop variety to the exclusion of other diversification practices,

Question 16
