SAT Reading and Writing Questions - standardized for website upload

Module 1

Question 2

Source PDF page: 2

Although oil shocks - such as the 10% rise in oil prices in November 1970 - can strongly affect individual consumers, Gbadebo Oladosu and colleagues have shown that at the level of national economies, their effects are often quite small. The effect of recent oil shocks on the gross domestic product of Germany, for example, 'was only slightly greater than zero. Which choice completes the text with the most logical and precise word or phrase?

- A. variable
- B. persistent
- C. subdued
- D. beneficial

Question 3

Source PDF page: 3

'Writer Lydia Davis observed that while many forms, such as the poem, are recognizable as such even as they evolve, there are pathbreaking "intergeneric" forms that might, for example, use elements of both fables and realist narratives to create something unclassifiable, Davis's own very short literary pieces arguably fit in this category, since they straddle the line between prose and poetry. Which choice completes the text with the most logical and precise word or phrase? innovative Boelusive C. established D. ambiguous Mauricio Drelichman and Hans-Joachim Voth's analysis of the debt repayments and expenditure of the government of Philip II (who ruled an empire including Spain and Milan from 1556 to 1598) found a s h had several short-term cash shortages, it ran an even larger surplus than did the seming contradiction: although the government government of eighteenth-century Britain, a nation considered. of fiscal virtue. Which choice completes the text with the most logical and precise word or phrase? A. asanetion B. a paradox D. an omen

- A. [choice text not detected]
- B. [choice text not detected]
- C. [choice text not detected]
- D. [choice text not detected]

Question 5

Source PDF page: 4

The following text is from Anthony Trollope's 1855 novel *The Warden*. Charles James is the son of a high-ranking clergy member. Charles James was an exact and careful boy; he never committed himself; he well knew how much was expected from the eldest son of the Archdeacon of Barchester, and was therefore mindful not to mix too freely with other boys. He had not the great talents of his younger brothers, but he exceeded them in judgment and propriety of demeanour; his fault, {fhe had one, was an over-attention to words instead of things; there was a thought too much finesse about him, and, as even his father sometimes told him, he was too fond of a compromise, Which choice best states the function of the phrase "if he had one" in the text as a whole? A. It acknowledges that the qualities in Charles James the narrator goes on to describe 'may not actually be undesirable characteristics, B. It concedes that Charles James's attempts to be held in respect are sometimes fruitless. C. It signals a shift in focus from describing Charles James's good qualities to criticizing his tendency to place too much value on artfulness. D. It anticipates readers' objections to the narrator's criticism of Charles James's faults, BROMTOESSBARRR TP 'The establishment of urban green spaces for the abatement of fine particulate matter and other major air-pollutant concentrations is gaining public support, but urban planners must proceed with caution given subtleties in the body of evidence for the strategy's efficacy. High-level reports have attributed pollutant reductions to cities' inclusion of green spaces; however, one study found that while trees are negatively associated with air pollutants when considered on a citywide scale, at the street level, this association is minimal and at times positive, Because research tends to focus on large-scale effects in cities not always

generalizable across spatial scales, decision-makers may be unaware that those outcomes are Which choice best describes the overall structure of the text?

- A. It outlines a problem that is of growing public concern, explains why an innovative solution to that problem is challenging to implement, and then suggests the importance of researching alternative solutions.
- B. It addresses an appealing approach to a prevalent problem, illustrates that the approach is not as uniformly successful as it may seem, and then further emphasizes the importance of recognizing nuances in the research on that approach. It details an initiative implemented in response to
- C. certain research findings, identifies an apparent inconsistency within those findings, and then explains how that inconsistency has typically been accounted for:
- D. It establishes the growing intensity of a public concern, details the most common method of mitigating that concern, and then refers to evidence that the method is, broadly ineffective. : BeesremseamnE EAN Sas)

Question 7

Source PDF page: 6

The Skin I'm In was Sharon G. Flake's debut novel. It was published in 1998. A debut novel is the first book that an author has published. Debut novels are especially interesting to literary critics (people whose job it is to evaluate books) and readers because these books offer a look at new voices in the literary world. According to the text, what is someone who professionally evaluates books called? A. A bookseller B. An author C. A literary critic D. A book publisher The following text is adapted from L. M. Montgomery's 1923 novel Emily of New Moon. Emily, a young girl who lives on a farm run by her aunt Elizabeth, wants to be a published writer someday. One of the things they [argued] about was the fact that Emily, as Aunt Elizabeth discovered one day, was in the habit of using more of her egg money to buy paper than Aunt Elizabeth approved of. What did Emily do with so much paper? They had a fuss over this and eventually Aunt Elizabeth discovered that Emily was writing stories, Emily had been writing stories all winter under Aunt Elizabeth's very nose and Aunt Elizabeth had never suspected it. She had fondly supposed that Emily was writing school compositions. Which choice best states the main idea of the text? A. Emily forgot to buy eggs when she was supposed to, B. Aunt Elizabeth thinks Emily should spend more time at school Aunt Elizabeth is surprised to find out that Emily has been writing stories. D. Emily is relieved to learn that Aunt Elizabeth enjoys reading Emily's stories.

BROMTOESSBARRR TP Average Hours Worked per Person per Year in 1950 and 2017 Country | 1950 | 2017 | Change in hours | Percent change in hours Peru | 2,157 | 1,932, -225 =-10% Canada | 2,209 | 1,696 -513 -23% Denmark | 2,049 | 1,400 -649 -32% Finland | 2,053 | 1,659 -394 =-19% Calculations may be inexact due to rounding. A student in an economics course is examining the decline since 1950 in average hours worked per person per year in various nations due to both increased productivity and the adoption of policies that limit working hours. The first task in this investigation is to determine how the decline in Finland compares to that in other countries. The student finds that, Which choice most effectively uses data from the table to complete the student's conclusion? A. the percent decrease in hours worked was greater in Finland than it was in Denmark, Canada, or Peru. B. though the decline in number of hours worked in Finland was less than that in Denmark and Canada, it was greater than that in Peru. C. while the number of hours worked rose in Finland between 1950 and 2017, it declined in Denmark, Canada, and Peru, D. though the decline in number of hours worked in Finland was greater than that in Denmark and Peru, it was less than that in Canada, wo Bee BADUTORSSSARRR AT

Question 10

Source PDF page: 8

Percent Change in Average Global Market Prices by Commodity in Two Agricultural Trade-Reform Scenarios' ; Percent change in | Percent change in tariff-removal Commodity 'TFA scenario scenario Fruits and vegetables =1.50 40.04 Processed foods "1.76 =1.00 Rice 0.37 41.36 Wheat "135, 1045 Ratified in 2017 by two-thirds of World Trade Organization member nations, the Trade Facilitation Agreement (TFA) is a trade-reform measure that aims to reduce redundant customs procedures and other costly aspects of international trade. In a 2021 report, economist Jayson Beckman modeled global market prices of several agricultural commodities under both the TFA and an alternative trade-reform scenario: removal of agricultural tariffs (taxes on imports that generally increase prices on imported goods). After reviewing data from the report, a student concludes

that overall, consumers of the commodities listed in the table would likely benefit more from the TFA than they would from tariff removal. Which choice most effectively uses data from the table to support the student's claim?

A. Under the tariff-removal scenario, the average prices of processed foods, wheat, and fruits and vegetables would decrease by more than 1%, while the average price of rice would decrease by less than 1%.

B. Under the tariff-removal scenario, the average price of processed foods would increase, but the average prices of wheat and rice would decrease.

C. Under the TFA scenario, the average prices of all four commodities would decrease, whereas under the tariff-removal scenario, only the average price of processed foods would decrease.

D. Under the TFA scenario, the average price of rice would decrease by a smaller amount than any of the other three commodities' prices would, whereas its average price would increase under the tariff-removal scenario.

Source: U.S. Mint, "Value, Cost, and Seigniorage of US Coins by Denomination, 2023." Total value of units | Gross cost (in | Seigniorage | Seigniorage produced (in | millions of | (in millions of | per \$1 issued millions of | dollars) dollars) (dollars) Denomination | _dollars) One-cent 414 1274 "86.0 2.08 Five-cent | 708 163.4 926 "BI Ten-cent_ | 266.6 1411 125.5 0.47 Quarter-dollar | 568.4 264.4 304.0 0.53.

Issuing a one-dollar coin yields positive seigniorage - the profit generated when the face value of a coin exceeds the unit cost of producing it - for Singapore's government, which in turn can be used to fund such services as transportation. Some countries, such as the Netherlands, have ceased manufacturing certain coins because their production created negative seigniorage. In an economics class discussing the data in the table, one student argues that in 2023, the one-cent coin was the least financially sensible for the US to produce, while another student argues that the five-cent coin was. Based on the information in the text and the table, the two students most likely disagree about the answer to which question?

- A. When evaluating the financial implications of issuing a coin, which is more important, the total seigniorage from issuing that coin or the seigniorage per dollar when issuing that coin?
- B. If issuing a given coin results in negative seigniorage per dollar issued, can that be changed to positive seigniorage per dollar issued by reducing the cost of issuing the coin?
- C. If issuing a given coin results in positive seigniorage per dollar but not as much positive seigniorage per dollar as issuing a different coin does, does it make financial sense to continue issuing the first coin?
- D. When determining whether it makes financial sense to issue a given coin, which is more important, the total value of the units of that coin produced or the gross cost of issuing that coin?

Question 12

Source: PDF page: 10

Chuck Palahniuk is one of several authors describing adverbs as "silly," novel and literary critics who have recommended minimizing the use of adverbs, especially those ending in -ly (e.g., "graciously"), in works of fiction. To investigate the prevalence of -ly adverbs in novels, author and statistician Ben Blatt used natural language processing - machine learning technology that reads and interprets text - to calculate the rates at which these words occur in the novels of William Faulkner, who was awarded the Nobel Prize in Literature in 1949. Blatt concluded that in Faulkner's oeuvre, there is a negative correlation between -ly adverb proliferation and perceived literary merit. Which finding, if true, would most directly illustrate the pattern Blatt identified?

- A. Whereas Faulkner's acclaimed novel *The Sound and the Fury* has one of the lowest -ly adverb rates among Faulkner's works, F. Scott Fitzgerald's classic novel *The Great Gatsby* has the lowest -ly adverb rate among Fitzgerald's novels.
- B. In *The Sound and the Fury*, which is widely recognized as a literary masterpiece, Faulkner used 42 -ly adverbs per 10,000 words, whereas in his less-acclaimed novel *Soldiers' Pay*, Faulkner used 148 -ly adverbs per 10,000 words.
- C. In his celebrated novel *Light in August*, Faulkner used 67 -ly adverbs per 10,000 words, whereas 67% of celebrated authors' novels that have fewer than 50 -ly adverbs per 10,000 words have been classified as great by critics.
- D. Whereas Faulkner used on average 92 -ly adverbs per 10,000 words in the 19 novels of Faulkner's that Blatt investigated, Toni Morrison, winner of the 1993 Nobel Prize in Literature, used on average 76 -ly adverbs per 10,000 words in her novels.

Question 13

Source: PDF page: 11

Students in a biology class investigated why individual house mice (*Mus musculus*) can differ from one another in their circulating sodium level. The students compared wild-type mice and knockout mice, which are mice with specific genes deactivated, when mice of each type were placed in similar naturalistic environments and taken for periodic blood sampling. Finding that knockout

mice with the gene *Asb5* deactivated tended to have lower concentrations of sodium in their blood than did wild-type mice, the students concluded that differences in circulating sodium level among house mice in nature are solely attributable to variations in the level of expression of *Asb5*. Which finding, if true, would most directly weaken the students' conclusion? A. Some wild-type mice were very similar to the knockout mice with regard to circulating sodium level but showed a wide variety of levels of expression of *Asb5*. B. A sampling of house mice captured in natural settings shows that individual mice can differ from one another in the level of expression of *Asb5*. C. The level of expression of *Asb5* does not appear to affect the functioning of any other genes in house mice. D. The mice with *Asb5* deactivated were identical to the wild-type mice except with regard to circulating sodium level.

TP scientist Artin Arshamian and his team sought to determine what affects a person's perception of an odor as pleasant: is it culture, personal taste, or aspects of human anatomy? The team assessed odor preferences in ten groups of people with different modes of living (urban, agricultural, and hunter-gatherer) including urban dwellers from a large city in Thailand and Chachi people from a small community in Ecuador. The team observed that across cultures, people generally rated odors about the same: vanillin, which smells like vanilla, was typically rated more pleasant than isovaleric acid, which smells like human sweat. The team therefore concluded that

Which choice most logically completes the text? A. A person who lives in an urban area is more likely to encounter the odor of vanillin than is a person who lives in a small community. B. A person's mode of living likely doesn't have a large influence on that person's perception of whether an odor is pleasant or unpleasant. C. A person who perceives rain odors as pleasant will likely perceive the odors as roughly equal in pleasantness. D. Culture likely plays more of a role in a person's perception of how pleasant an odor is than does human anatomy.

Question 1

Source PDF page: 22

In New Zealand, France, and other countries with strong democratic institutions, the this may seem to the state's ability to curb inflation, Raj Desai et al. have shown that strongly democratic states can and do deploy effective counter inflationary policies, Which choice completes the text with the most logical and precise word or phrase?

- A. hamper
- B. extort
- C. underscore
- D. impugn

Question 2

Source PDF page: 22

Although the clustering of cutlery manufacturing firms in Sheffield, UK, is often cited as typical of industrial agglomeration, Giulia Faggio et al. use UK data to show that the mix of factors driving the phenomenon is, across industries: while access to specialized suppliers can prompt agglomeration, collocation among refined petroleum product manufacturers occurs for different reasons. Which choice completes the text with the most logical and precise word or phrase?

- A. imperative
- B. credible
- C. heterogeneous
- D. addictive 2s Sena BROMTOESSBARRR TP

Question 3

Source PDF page: 23

Studying wrappers from old cover images from out-of-print 'magazines, and posters promoting concerts by long-forgotten musicians may seem like a frivolous pursuit, but ephemeral objects like these are useful as cultural change, revealing shifts in norms, values, and concerns that traditional objects of historical inquiry may not. Which choice completes the text with the most logical and precise word or phrase? A. pretexts for B. conjectures about C. manifestations of D. inducements to The 2023 anthology The Big Book of Cyberpunk contains 108 stories, including Fritz Leiber's "Coming Attraction" (1950) and Erica Satifka's "Act of Providence" (2021). With its chronological scope, it is more comprehensive than the much shorter 1986 cyberpunk anthology Mirrorshades, but Mirrorshades's careful selection of stories 'makes that anthology more Which choice completes the text with the most logical and precise word or phrase?

- A. capacious
- B. outmoded
- C. cursory
- D. discerning 6 Sena BROMTOESSBARRR TP

Question 5

Source PDF page: 24

The following text is from William Carlos Williams's 1925 creative nonfiction book *In the American Grain*. Williams is discussing how works by nineteenth-century US poet and fiction writer Edgar Allan Poe were received by American readers. Poe must suffer by his originality. Invent that which is new, even if it be made of pine from your own yard, and there's none to know what you have done. It is because there's no name. This is the cause of Poe's lack of recognition. He was 'American, He was the astounding, inconceivable growth of his locality, As used in the text, what does the underlined figurative phrase most nearly mean?

- A. Personal experiences that are hard for others to comprehend
- B. Ideas you have never previously expressed
- C. Elements of the culture in which you live
- D. Inspiration you received while reading independently

Question 6

Source PDF page: 24

To prevent excessive microbial growth in the closed habitat of the International Space Station, relative humidity is carefully maintained. Nonetheless, *Veillonella parvula* and other bacteria, which have the potential to damage spacecraft materials, can when routine crew-member activities (e.g., handwashing) produce localized humidity conditions that exceed the specified maximum for the station overall Which choice completes the text with the most logical and precise word or phrase? Abate B. recalibrate C. proliferate D. rehabilitate 2" Sena BROMTOESSBARRR TP In Tunica, an Indigenous language from the lower Mississippi Valley in what is now the United States, *mili* means "red," whereas *mifimilita* is used to refer to several red things. This phenomenon, in which an element of a root word is repeated, sometimes with modification, within another word that is

related to the root word, is called reduplication. In this case, the entire word *mili* gets repeated in *milimiita*. There are many examples of this type of reduplication in Tunica. Which choice best describes the overall structure of the text?

- A. It presents some specific words in Tunica, describes the general linguistic frequently in Tunica,
- B. It identifies the most frequently occurring words in Tunica, explains why it is difficult to translate those words into English, and then provides examples of languages other than English into which those words
- C. can be translated. C. It explains the phenomenon of reduplication,
- D. discusses why reduplication has been controversial among scholars, and then argues that an analysis of Tunica could help resolve that controversy. It describes the relationship between Tunica and several other languages, raises a question about the nature of that relationship, and then answers that question. 8 eee 8 Beourensesanmm EEF Sas)

Question 8

Source PDF page: 26

The *True Love*, first published in 1992, is a novel in Patrick O'Brian's *Aubrey/Maturin* series, which includes twenty books plus an unfinished fragment of a twenty-first. Some critics have found fault with the abrupt endings of *The True Love* and other books in the series, saying that they do not finish conclusively but arbitrarily stop. But other critics argue that the books should not be thought of as discrete texts with traditional beginnings and endings but as a single incredibly long work, similar to other multivolume stories, such as Anthony Powell's *A Dance to the Music of Time*. Which choice best describes the function of the underlined portion in the text as a whole?

- A. It explains why many critics find the *Aubrey/Maturin* novels to be entertaining despite flaws in the novels' structures.
- B. It argues that the unusual structure that O'Brian uses for *The True Love* makes it one of his least entertaining books.
- C. It presents a reason most critics think the *Aubrey/Maturin* series should not have the literary renown of similar works like *A Dance to the Music of Time*.
- D. It describes a characteristic of the *Aubrey/Maturin* novels and summarizes a negative assessment of it » Sena BROMTOESSBARRR TP

Question 9

Source PDF page: 27

Text 1 In separate studies, Marine Fernandez and colleagues and Xinhua He and colleagues examined whether plants transfer nutrients to one another using a common mycorrhizal network (CMN) - a lattice of fungal strands in the soil. Fernandez and colleagues excluded all pathways other than the CMN by using barriers to keep the plants' root systems separate while allowing mycorrhizal strands through - a crucial step He and colleagues' study did not take. Text 2 Fernandez and colleagues took the necessary precaution of separating the plants' root systems (thereby excluding root-to-root transmission). However, any barrier used 'must allow the thread-like hyphae of a CMN to pass through, and this permeability 'would also allow liquids through. Thus, the researchers' experimental design cannot ensure that any nutrient transfer observed can be attributed to a CMN and not to some other pathway. Based on the texts, which choice best describes a similarity in the points of view presented in Text 1 and Text 2? 'A. Each text attempts to dispel a common misunderstanding about the likelihood of plant-to-plant nutrient transfer. B. Each text assumes that most nutrient transfer between plants is via a CMN. C. Each text analyzes methods for studying CMN nutrient transfer in order to propose an alternative method of study. D. Each text critiques the methodology of a study about nutrient transfer via a CMN, 2 Sena BROMTOESSBARRR TP

Question 10

Source PDF page: 28

Founded in 1996, the Museum of Latin American Art showcases modern and contemporary art by Latin American artists and Latino artists in the United States. It is, located in Long Beach, California, and has more than 1,300 objects in its collection. Since

2000, a number of other institutions devoted to Latino cultures have opened in the United States. A notable example is LA Plaza de Culturay Artes in Los Angeles. It focuses on Mexican American art and culture. Which choice best states the main topic of the text?

- A. The history of Los Angeles
- B. The decline in the number of people attending museums Latino
- C. ultural institutions in the United States,
- D. The geography of Latin America

Question 11

Source PDF page: 28

Argyroxiphium caliginis is among the twenty-eight species of silversword plants, found only on the Hawaiian archipelago that collectively illustrate the process of adaptive radiation, or the rapid diversification of an ancestral species into different, related species. Each silversword species is physically distinct, with mature plant forms ranging from trees and shrubs to vines. However, they all descended from a common tarweed plant species, with their unique physical characteristics emerging as they adapted to the archipelago's many specific habitats over time. Which choice best states the main idea of the text?

- A. Most plants that grow on the Hawaiian archipelago are descendants of a single founder species.
- B. All silverswords that grow on the Hawaiian archipelago have similar physical characteristics.
- C. The Hawaiian archipelago exhibits many distinct habitats and species.
- D. Silverswords are good examples of adaptive radiation on the Hawaiian archipelago. x Sena BROMTOESSBARRR TP

Question 12

Source PDF page: 29

The bird species Piculus flaviguda (the yellow-throated woodpecker), which forages sacked in relatively dense vegetation, and Willisonis poecifinotus (the common scale antbird), which forages in open areas or low density vegetation, share territory in French Guiana with Thanmomanes caesius (the cinereous antshrike), which emits a loud alarm call when it detects predators. Biologist Ari Martinez and colleagues, who studied the ecological community the species share, hypothesized that there is an inverse relationship between birds' field of vision while foraging and their sensitivity to alarm ealls from neighboring species. Which finding, if tue, would most directly support Martinez and colleagues' hypothesis?

- A. W, poecitinotus displayed no reaction when Martinez and colleagues played 7 ceaesius alarm calls, whereas P. flavigula displayed predator-avoidance behavior in response to the calls
- B. Many local bird species with similar foraging habits to those of P flavigula displayed no reaction when Martinez and colleagues played T: eaesius alarm calls, whereas P.flaviguia displayed predator-avoidance behavior.
- C. Some individuals of ¥. poecitinotus displayed predator-avoidance behavior when Martinez and colleagues played 7: caesivs alarm calls, whereas nearly all did when P, flaviguta alalm calls were played.
- D. When Martinez and colleagues played 7 caesius alarm calls, P flavigula and W. poccilinotus displayed no reaction, whereas T. caesius displayed predator-avoidance behavior. 2 Sena BROMTOESSBARRR TP

Question 13

Source PDF page: 30

'Nautilids are marine mollusks that begin growing their shells before emerging from their eggs and continue to add shell segments throughout their lifetimes. The walls between their shells' chambers are called septa, and the deeper the water in which a septum forms, the greater the concentration of the isotope oxygen-18 the septum will contain. Since temperature falls as depth increases, if the area of ocean a nautilid inhabits is known, this isotopic signature can reveal the temperature at which its septa formed. Paleontologist Amane Tajika and colleagues examined each of the septa in 'wo nautilid shells and concluded that septum sample M20 formed at a temperature of

- A. [choice text not detected]
- B. [choice text not detected]

C. [choice text not detected]

D. [choice text not detected]

Question 15

Source PDF page: 30

2°C whereas sample FO4 formed at 22.5°C Which finding, if true, would most directly weaken the researchers' conclusion?
A. At a depth of 355 meters in the nautilids' habitat, the water is 15.2°C and the concentration of oxygen-18 is equal to that in sample M20. B. The concentration of oxygen-18 in FO4 is lower than that in M20. C. The concentration of oxygen-18 in FO4 is higher than that in M20. D. At a depth of 90 meters in the nautilids' habitat, the water is 22.5°C and the concentration of oxygen-18 is equal to that in sample FO4.
3 Sena BROMTOESSBARRR TP Average Ratings of Perceived Personality Traits of Dogs and Human Willingness to Keep or Interact with Them
Image 1D | Irises Not Immature | Would not | Would not number friendly | (0)-Mature | keep interact O- © (0)-Would | with Friendly keep 3 | (0)-Would (0) interact with @) 4 Tight 267 4.03 14 7 4
ight 2.1 3.27 155 1.85 8 dark 3.52 291 19 245 3 dark 3.88 251 2.65
Interested in how differences in the color of dogs' irises affect human responses to dogs, Akitsugu Komno et al. showed close-up images of dogs' faces to human participants and asked them to rate the dogs' traits and their own attitudes toward the dogs. Komno et al. suggest that differences in iris color led participants to view some dogs as more vulnerable and in need of protection than others and that this phenomenon could help explain the association the researchers observed between iris color and participants' inclinations to interact with or keep dogs, as illustrated by the finding that Which choice most effectively uses data from the table to complete the statement?

- A. participants rated the dog in image 3 as less mature than the dog in image 8 and rated the dog in image 14 as less mature than the dog in image 24
- B. dogs that participants rated as friendlier were also dogs that participants indicated a stronger willingness to interact with or keep.
- C. the more mature a dog was perceived to be, the more likely participants were to rate it as having light irises.
- D. participants favored the dogs in images 3 and 8, which they rated as less mature than the dogs in images 24 and 14. a Bee BADUTORSSSARRR AT

Question 15

Source PDF page: 32

Anthropogenic noise (sounds from human sources like traffic or mining) can affect animals, as Soledad Lucia Uran and colleagues found in a 2012 study of brown rats. A 'meta-analysis of more than 100 such studies examining various species found that, for every study, relevant traits or behaviors of the animals were observably different between the exposed group and the otherwise similar but unexposed group, regardless of whether that difference was beneficial or detrimental for the exposed group. So while a study of birds might show a difference that benefits the exposed group, and a study of mammals might show a difference that's harmful to the exposed group, both differences are substantial. Therefore, the results of the meta-analysis suggest that Which choice most logically completes the text?

- A. exposure to anthropogenic noise will likely have noticeable effects
- B. both on 'mammals such as brown rats and on birds such as reed buntings, but the nature of that effect
- C. could be very
- D. different for the two species. B the studies of the birds likely found significant anthropogenic noise than most studies of mammals except the study of brown rats by showing larger effects of exposure to Soledad Lucia Uran and colleagues. the studies in the meta-analysis that examined mammals were more likely than those about birds to specify whether the observed effects were detrimental D. the study conducted by Soledad Lucia Uran and colleagues found substantial differences, but studies included in the meta-analysis of mammals other than brown rats likely did not. 3s Sena BROMTOESSBARRR TP

Question 16

Source PDF page: 33

To measure changes in parasite abundance over time, Chelsea Wood and colleagues counted parasite individuals preserved on specimens of striped sea perch, surf smelt, and six other fish species collected from Puget Sound between 1880 and 2019. Using statistical models to estimate historical populations, the researchers determined that for every 1°C increase in annual average sea surface temperature, the abundance of complex life cycle parasites like *Lecithaster* sp. that require at least three

unique host species throughout their life cycle decreased by 38%. However, the abundance of *Bomolochus betlonis* and other directly transmitted parasites, which require only one host species, was essentially unchanged. These findings suggest that Which choice most logically completes the text?

- A. *Lecithaster* sp, abundance decreased by 38% over the period studied, whereas *B. ellonis* abundance did not.
- B. parasites that rely exclusively on either striped sea perch or surf smelt are more sensitive to rising temperatures than are parasites that can infect both species throughout their life cycles.
- C. dependency on only a single host species may confer on parasites some resilience to rising sea surface temperatures.
- D. as the number of hosts that complex life cycle parasites require increases, the parasites' tolerance for rising sea surface temperatures decreases proportionally
